Release Notes for 6/12/2018 WISEid/WISEstaff Production Release
(Core Apps Team Sprint 161 2-Week Work Cycle)

Feature Title	Notes
WISEid: Hotfix--Opening multiple Change Requests no longer impacts change requests	We fixed issues with the Message & Change Request page where when you expanded multiple Change Requests at the same time, specific buttons and comments would not connect to the correct Change Request.
WISEid: Removed message 6528 and added privilege to ID Data Entry Role	We fixed multiple issues with the Person File Uploads. After analysis, we found that a large number of districts thought the WISEid Data Entry role had privileges to create new WISEids by way of Person Uploads and were unaware this wasn't actually happening because they didn't read the upload Results page download file errors. We decided to avoid confusion by adding WISEid creation ability to the WISEid Data Entry role. We also found and fixed the message 6528 about blocking creations by Person Upload. It was triggering when it shouldn't based on agency roles and blocking the creations of new WISEids. Lastly, during testing we found and fixed an issue where district users with update access couldn't update existing WISEid info since an April update.

WISEstaff: Added school and district address to Public All Staff Report download	When the Public Staff Reports are populated for 2017-18 staff data, the school and district address info will display in the Public All Staff Report download.
