

Release Notes for 11/23/2021  
WISEid/WISEstaff  
Production Release

Feature Title	Notes
WISEid: Suffix change requests still being created	Fixed issue where suffix only changes were still being created in some cases. Now, the only change events that will <a href="#">trigger a Change Request</a> are changes to first name, middle name, birth date and/or Entity ID.
WISEid: Update filters when viewing “Action Needed” notifications	Fixed an issue where viewing a “Change Request Action Needed - Student/Staff Data” notification was not applying the correct filters when accessing it from the Notification Inbox and going to the Change Request page.
WISEstaff: Lifetime licenses are not showing as active licenses	Fixed issues where Licensing Downloads were not showing all staff as they should for some districts. We have identified another future fix to ignore staff with an invalid Entity ID which is currently breaking the download. We are contacting districts who are affected to remove the invalid Entity IDs.

<p>WISEstaff: Validation warnings are regenerating after acknowledgment</p>	<p>Validation warnings 4212 and 4213 were generating duplicates when the user did manual edits to the assignment in the application. We have fixed this so it won't happen and also removed the duplicates so only one valid message per person remains.</p>
<p>WISEstaff: Public Aggregate Staff Report not sorting alphabetically</p>	<p>Fixed sorting by hiring agency issue in the Public Aggregate Staff Report</p>
<p>WISEstaff: Prevent excessive file size uploads</p>	<p>We have limited file uploads to these maximum sizes to prevent upload faults: WISEid Person Uploads - 10MB, which is about 100k records; Contract and Assignment Uploads - 2MB, which is about 35,000 records.</p>
<p>WISEstaff: Exclude agencies from statewide validation job if no assignments or contracts exist for the current school year</p>	<p>We have modified our nightly job that runs the WISEstaff validation to skip districts if there are no contracts and assignments for the hiring agency. This will speed up performance and next year you should not see validation messages until you start loading contracts and assignments.</p>
<p>WISEstaff: HOTFIX: Acknowledged warnings are reverting to unacknowledged after refreshing data validation</p>	<p>Previously released as a hotfix to retain acknowledgment status on acknowledged warnings.</p>
<p>WISEstaff: Improve handling of out-of-range grades on Edit Assignment page</p>	<p>Confirming that previous reports of out-of-range grades not</p>

	<p>displaying on the Edit Assignment page have been resolved and now any invalid grades that are uploaded will display but will be grayed out when the grade is not valid for the selected school or LEA.</p>
