

Release Notes for 11/9/2021
WISEid/WISEstaff
Production Release

| Feature Title | Notes |
|--|--|
| WISEid: UI Person Edit - ask for change request comment only when type of change requires it | On the Edit WISEid page when editing a person, the Change Request comments will only be asked for when changing first name, middle name or birth date. These are the only fields in that section that still generate a Change Request. |
| WISEid: Change History missing on some name changes | Some Person Change History was not showing up. We have restored all missing Person Change History and prevented future issues. |
| WISEid: Convert ALL Birthdate change requests to DPI review | Previously, only birth date changes with a 3-digit or more difference were routed to DPI CST to review. Now ALL changes to the birth date will be routed to DPI CST to review. Other districts will no longer review any birth date change requests. We have done this because we have found that changes to birth dates are the biggest indicator that a district may have picked up the wrong WISEid for a person. |

|--|--|
| <p>WISEstaff: Update Entity ID Matching job to include Staff Local Person Id</p> | <p>Previously, the job that looks for an exact match between WISEid person info and ELO person info was only run on staff with a current year Licensed Assignment. We have modified the job so it also looks for any person with a staff Local Person ID in your agency. This should speed up how soon Entity IDs are auto-populated and help identify those who need manual review.</p> |
| <p>WISEstaff: HOTFIX: Acknowledged warnings are reverting to unacknowledged after refreshing data validation</p> | <p>Fixed bug where acknowledged Warnings reset to unacknowledged after validation refresh.</p> |
| <p>WISEstaff: Milwaukee and other districts - Contract upload faults</p> | <p>We found Milwaukee Public Schools and 8 other districts would not allow Contract uploads because their school codes overlapped with type 29 agencies. We have fixed this so Contract uploads will not fault.</p> |
