Infinite Campus session at
Data, Data, and More Data Workshop
June 16, 2015

Topics covered
    A. Directions for Attendance Queries: (Screen shots in linked document.)

        1. First build an ad hoc to pull all of your students with a health conditions.
           See Attached.
             a. Ad Hoc - Filter Designer
             b. Create new query wizard - student. Click create.
             c. Give it a good name.
             d. Choose the following fields: Last Name, First Name, Gender, Grade,
                ConditionCodeDesc, conditionEnd
             e. On the filter parameters screen - use the operator for condition end
                IS NULL.
             f. Save and test. Ensure that you are getting the students that look
                familiar.
        2. Once built - this ad hoc can be applied to the ADA and ADM Detail report.
           This report is located under the attendance module. Attendance > Reports >
           ADM and ADA detail.
