Not only are students provided with the nourishment needed to succeed in a traditional classroom, but they also learn about well-balanced meals and food choices in the cafeteria. This type of learning will impact students every day. Educate your students to make healthier food choices by offering taste testing events.

Children are often hesitant to try new foods. They may be unwilling to select a new food offered as part of the school meal if they are not sure they will like it. Hosting fun taste tests can be used to introduce students to the smell, texture, and flavor of food in a non-intimidating way. Observing peers and teachers try new foods can motivate students to try new foods. One taste of a new food can change a student’s perception and lead to the development of a healthy eating habit. Wisconsin Team Nutrition recommends taste testing new foods prior to adding them to a menu as a way to increase selection of the food and reduce food waste.
Identify goals – before starting a taste test program, establish goals about what you hope to get out of the activity. Are you implementing a taste test program to expand salad bar offerings? Do you want to broaden the menu or expand a Farm to School program? Identifying your goals will help determine the foods you offer in the tasting.

Create a committee – a comprehensive taste test program can be a labor intensive endeavor for one person. It is beneficial to develop a committee that can assist with all facets of the program (food preparation, food service, nutrition education, survey tabulation, etc). People to consider including on the committee are the foodservice director, school head cook, supportive teachers, interested parents, and the custodial staff. Be careful about soliciting assistance without adding excessively to their workloads.

Determine program details – with the input from your school partners, begin to work out the details of the program. How many taste tests will be conducted, and how will they be evaluated? What foods will be tested, and where will products be purchased from? Where and when will the taste tests be conducted, and who will be responsible for purchasing, preparing, and serving the foods? Will nutrition education be part of the activity, and who will be responsible for providing it?

Offer students hands-on experiences – studies have shown that students who help prepare a food for a taste test are more likely to try it and like it than those students who have not. If possible, consider offering hands-on lessons to provide students with the opportunity to participate in the food preparation.

Keep the channels of communication open – once you have answered all the logistical questions about planning a taste test, be sure to communicate your plan with the school and community. You want to make sure you are choosing dates that work for the entire school. Planning a taste test on a day when half of the students are gone on a field trip is not ideal. Make sure the principal, teachers, foodservice staff, and custodial staff are aware of the activity to ensure no scheduling conflicts arise.
Select the food(s) that you will be offering for the taste test(s). You may consider offering multiple taste tests to increase the students’ exposure to a certain food or recipe.

If you will be providing nutrition education, identify specific topics and questions to ask the students.

Describe the featured food and display this information.

Cut the featured item into small pieces or slices so that each student can taste a bite of the item. Consider leaving unprocessed samples of the ingredients at the taste test to allow students to see and touch the foods in their original form.

Offer portions of the item to each student. Allow students to decline samples if they are uninterested or unwilling to participate in the test. Ask students to think about how each item tastes, smells, and looks different from the other varieties and record or remember their observations.

Have students share their thoughts on the samples via a survey.
Taste Test Tips

• Don’t stress out! Leading a tasting should be simple, easy, and fun! Remember that the amount of time dedicated to conducting a taste test is up to you.

• Find teachers, parents, or community volunteers to assist in coordinating the activities.

• Keep samples small and voluntary. Taste testing is a great way to introduce students to new foods in a pressure-free way. Don’t bombard students with large portions of a new food or require students to take the sample. Doing so may cause students to have a negative reaction to the food prior to actually tasting the item.

• Be prepared for all reactions. Students can be picky eaters and not like what you are offering. Be patient with your students. Many people may have to try a new food ten to fifteen times before he or she accepts it.

• Announce the results to the whole school after the taste test has finished and plans for continued use of the food.
Taste Test Timeline

Two Weeks Before the Taste Test

• Find parents, students, or staff members that are willing to prepare and serve the food the day of the taste test.

• Write an announcement of the taste test for the school newsletter or website.

• If purchasing directly from a farmer, contact him or her to be sure the product will be available and invite the farmer to the taste test.

One Week Before the Taste Test

• Make sure that taste test items have been purchased or are being delivered on the date needed.

• Make copies of the taste test surveys and any education materials you will be using.

• Advertise the taste test in the school newsletter and school website. You may consider inviting the local paper or news station.

Day of the Taste Test

• Announce the taste test during school announcements and post signs throughout the school.

• Set up taste testing table or carts.

• Conduct the taste test and distribute the surveys.

One Week After the Taste Test

• Tally the results of the taste test and post them in the school newsletter, cafeteria, or school website.

• Send a letter home to parents describing the taste test and results. Consider including nutrition education materials in this mailing.
Taste Test Survey

The food I tried: ___________________

Tried It     Liked It     Loved It

It’s Fun To Try New Foods!
Circle the faces below to tell us how you feel about the food.

The food looked:

The food tasted:

The food smelled:

I would eat the food again.

Taste Test Survey

Directions: Check one rating for each of the following: Appearance, Flavor, Texture, Smell, and Overall Acceptability on a scale from 1 to 5, 1 being “like a lot” and 5 being “dislike extremely.”
