Giant panda

From Wikipedia, the free encyclopedia

"Panda" redirects here. For other uses, see [Panda \(disambiguation\)](#).

The **giant panda** (*Ailuropoda melanoleuca*, lit. "black and white cat-foot"; **simplified Chinese**: 大熊猫, **traditional Chinese**: 大熊貓; **pinyin**: *dàxióngmāo*, lit. "big(大 dà) bear(熊 xióng) cat(猫 māo)"),^[2] also known as **panda bear** or simply **panda**, is a bear^[3] native to south central China.^[1] It is easily recognized by the large, distinctive black patches around its eyes, over the ears, and across its round body. The name "giant panda" is sometimes used to distinguish it from the unrelated **red panda**. Though it belongs to the order **Carnivora**, the giant panda's diet is over 99% **bamboo**.^[4] Giant pandas in the wild will occasionally eat other grasses, wild tubers, or even meat in the form of birds, rodents or carrion. In captivity, they may receive honey, eggs, fish, yams, **shrub leaves**, oranges, or bananas along with specially prepared food.^{[5][6]}

The giant panda lives in a few mountain ranges in central China, mainly in **Sichuan** province, but also in **Shaanxi** and **Gansu** provinces.^[7] As a result of farming, **deforestation**, and other development, the giant panda has been driven out of the lowland areas where it once lived.

The giant panda is a **conservation reliant endangered species**.^[8] A 2007 report shows 239 pandas living in captivity inside China and another 27 outside the country.^[9] As of December 2014, 49 giant pandas live in captivity outside China, living in 18 zoos in 13 different countries.^[10] Wild population estimates vary; one estimate shows that there are about 1,590 individuals living in the wild,^[9] while a 2006 study via **DNA analysis** estimated that this figure could be as high as 2,000 to 3,000.^[11] Some reports also show that the number of giant pandas in the wild is on the rise.^{[12][13]} However, the IUCN does not believe there is enough certainty yet to reclassify the species from Endangered to Vulnerable.^[1]

While the **dragon** has often served as China's **national emblem**, internationally the giant panda appears at least as commonly. As such, it is becoming widely used within China in international contexts, for example as one of the five **Fuwa** mascots of the **Beijing Olympics**.
