

**Release Notes for 11/2/2017 WISEid/WISEstaff Production Release
(Core Apps Team Sprint 147 2-Week Work Cycles)**

Feature Title	Notes
WISEid: Errors fixed on WISEid Person Edit UI (Part #2)	We fixed a bug where if you edited a WISEid Person and clicked Canceled, when you reopened it to do further edits, it would look like the old, canceled values were still there. They were just temporarily cached.
WISEid: Now showing Change Request history and comments on Possible Duplicate Review Screen	When DPI CST reviews Potential Duplicates, they will now be able to see any Change Requests related to each person to help make better choices in selecting the surviving record.
WISEstaff: Added/Updated Assignment FTE limit validation	We created a first-level validation to reject an Assignment Upload row and display as errors when FTE exceeds 3.0.
WISEstaff: Resolved Assignment Upload Fault issue	DeForest & Northland Pines experienced faults caused by us missing the maximum FTE value validation. This has been fixed.
WISEstaff: Cleared Info messages button creates unnecessary message	We fixed a bug on the Validate Staff Data page when the Clear Non-Required Data button was run because sometimes a system error would appear when it shouldn't.
WISEstaff: EPIC Data Quality Check #00 – Part 5 Roadmap created agency boxes to indicate step completion	On the Annual Staff Collection Roadmap, the checkboxes for steps that each district must track on their own (because we can't calculate them) were not clickable. We changed the setting for checkboxes to store per district per year, so now as you complete these, you should check them to indicate you have completed these steps.
WISEstaff: Removed Classes columns from Download Assignments file	We have stopped collecting the number of classes related fields in the Assignment Upload, so we removed them from the Manage Staff Data downloads for the current and previous years.

<p>WISEstaff: Contract UI Delete button now clears out Fringe Benefits field</p>	<p>We fixed a bug where when you clicked the Delete button for Contracts, the Fringe Benefit value would show a value. It was not real and was just in the browser cache.</p>
<p>WISEstaff: 16-17 Audit Results are now showing.</p>	<p>All years with audit results published will now show in the application. It was previously limited to active collection year.</p>
