

**Release Notes for 9/21/2017 WISEid/WISEstaff Production Release
(Core Apps Team Sprint 144 2-Week Work Cycles)**

Feature Title	Notes
WISEid: Person Upload no longer faults from merged WISEids	We fixed issues around persons with merged WISEids that were causing the Person Uploads to fault for some districts.
WISEstaff: Added License Type Code and Stage	We fixed a couple elements (License Type Code and Stage field) from the DPI ELO License Lookup application that were not present in the new WISEstaff Staff Edit page. The License Information section should show the exact same information for the selected person that is also in the ELO License Lookup. Also, we fixed a few minor bugs around license data not showing correctly in rare scenarios.
WISEstaff: Modified All Staff Report & Staff Corrections Form to have a max capacity message	We determined with our current infrastructure limitations that we can only support a maximum of 400 pages in a single export to PDF for the All Staff Report and the Staff Corrections Form. If you are a large district over 400 staff members, we suggest breaking the report exports up by using filters such as schools. There is now a message to this effect on the report filter area for these two reports.
WISEstaff: Session tracking of Pagination Validate Staff Data and Staff List	We created functionality so when you are on the Validate Staff Data page or Staff List, if you leave from a certain page number other than Page 1 to drill into a validation message or staff member in the results, you will return to that same page when you close rather than returning back to Page 1 again.
WISEstaff: Validated FTE to prohibit decimals over hundredth place	We created an assignment upload validation error #4501 to prevent rows from uploading where the decimal is over two digits long. This will now match the limits in the UI and what the Assignment

	Upload file specifications have been requesting for several years now.
WISEstaff: Validated Staff Data file error message when Assignment doesn't exist anymore	On the Validate Staff Data page or in the download of that page when you click the resolve link, before it was going to an assignment that no longer existed with an odd error message. This happened when the assignment was deleted after the validation messages were updated, usually because the same assignment had multiple error messages. We updated the message, so you get a clear message of "Error - This Assignment has been deleted."
