# Release Notes for 2/14/2017 WISEid/WISEstaff Production Release (WISEid Core Apps Sprint 128 2-Week Work Cycle)

| Feature Title | Notes |
|---|---|
| **WISEid:** District users can block changes to middle name to a null value from an existing value | If a person presently has a middle name populated per a legal name, if anyone tries to update with a null value, it will be blocked. If there is a real reason to remove a middle name, agencies should contact the DPI Help Desk. |
| **WISEid:** Bug Fix-- Corrected Person Upload Fault due to middle initial block | Restored middle initial logic introduced in an earlier release and fixed an issue with the earlier release where middle name changes were causing faults. Now if users try to update the full middle name with a matching middle initial, it will be ignored. |
| **WISEid:** Cleanup job to move Suffix from Last Name field | Cleaned up all records besides those in the current year WISEdata reporting for suffixes inserted in the last name field. The problem records were changed to move the suffix to the suffix field. |
| **STAFF:** Aggregate Reporting Tool | On the WISEstaff tab we changed the "File Tasks" menu section to "Work with Staff Data. " Under this we introduced the "Enter Aggregate Stuff FTE" tool. This tool allows districts to enter estimates of aggregate FTE for the assignments of: Bus Driver Special Ed, Bus Driver, Plan Maintenance and Operational Personnel, and Cafeteria Worker. Report FTE in whole numbers with decimal to the tenth (one person working full time is 1.0 FTE), NOT percent method we use for individual person assignments. The limit per assignment per school is 1,000 FTE. Contracting Agency Name is optional. |
| **STAFF:** Audit information section and pdf instructions | On the Audit Results page we added a section for "Information about Audit Reports" with a link to a PDF explaining the different audit reports. |

| | |
|---|---|
| **STAFF:** Bug Fix-- Statewide Validate Staff Data job is not removing unacknowledged warnings | When DPI runs Validate Staff Data statewide, it was removing acknowledgements from Warnings.  We have fixed it, so that won't happen again.  We already fixed the changes in a previous release, so this release is for the prevention of future problems only. |
| **STAFF:** Hiring Agency Assignment Count Widget Part 1 | Introduced Hiring Agency Assignment Count on the WISEstaff Home Page in the Staff Dashboard section for the current year plus the last two years.  There is no ability to drill into the chart yet.  That will come in later releases. |
| **STAFF:**  Hotfix-- Corrected Validate Staff Data from inappropriately hiding other messages when fixing one person | We found an issue on the Validate Staff Data page where if you clicked on Resolve for one person and then fixed the issue then returned to Validate Staff Data, it didn't show any more errors or would only show remaining errors for that one person until you refreshed validations again.  This was fixed, so it won't happen. |
