

**Release Notes for 2/23/2017 WISEid/WISEstaff Production Release  
(WISEid Core Apps Sprint 129 2-Week Work Cycle)**

Feature Title	Notes
<b>WISEid:</b> Expanded Lookup for Person Suffix	<p>We now added support for the following suffixes based on user request:</p> <ul style="list-style-type: none"> <li>• VI</li> <li>• VII</li> <li>• VIII</li> <li>• IX</li> <li>• X</li> <li>• XI</li> <li>• XIII</li> <li>• XIV</li> <li>• XV</li> </ul>
<b>WISEid:</b> Hotfix-- Production Change Requests will now be approved	<p>Users couldn't approve Change Requests because of a data issue that was resolved. Users can now approve Change Requests.</p>
<b>STAFF:</b> Fixed paging number and Entity ID# on WISEstaff Home	<p>On the WISEstaff Dashboard the Missing Entity ID widget wouldn't allow users to page when multiple pages were generated. This has been fixed.</p>
<b>STAFF:</b> Aggregate Reporting Tool added Contracting Agency Name to overview grid	<p>Added the Contracting Agency field on the overview of the Enter Aggregate Staff FTE page.</p>
<b>STAFF:</b> Data Quality Check #05 - FTE, Contract Days, and Salary Report for district level	<p>Created the first of the Data Quality Check Reports which check for suspiciously low salaries of regular employees. Users can manipulate FTE %, Contract Days, and Salary filters to find other data outliers that may be incorrect.</p>
<b>STAFF:</b> Added Hiring Agency Contract Count Widget Level 1	<p>On the WISEstaff Dashboard we added a graph widget to show the Contract Counts for the current year compared to the last three years for the hiring agency.</p>
<b>STAFF:</b> Hotfix-- Aggregate Reporting Tool - changed FTE from percent to numbers of FTE	<p>Based on user feedback we changed the FTE report from percent format to whole numbers for only the Enter Aggregate Staff FTE reporting. So, for example, five</p>

	full time employees would be entered as 5.
<b>STAFF:</b> Hotfix-- Validate Staff Data fixing one person no longer hides other messages	Fixed a bug where if you were working staff on the Validate Staff Data page and clicked on Resolve, then fixed issue, and came back to Validate Staff Data, it would not show the rest of staff validations unless you clicked the Refresh Validation button. Now all validations are left on screen.
<b>STAFF:</b> Removed run of staff validation when single assignment saved	In the Assignment UI when a user edits a single Assignment, we no longer automatically validate the assignment on a Save button push. This can cause delays, especially when the system is under heavy load. There is now a button to Run Validation if you want to run it for the single Assignment to verify there are no longer any validation messages for that assignment. It's much more efficient to run the Refresh Validation button on the Validate Staff Data page, which runs the validation for the entire hiring agency for all assignments.
