Release Notes for 3/9/2017 WISEid/WISEstaff Production Release
(WISEid Core Apps Sprint 130 2-Week Work Cycle)

Feature Title	Notes
WISEid: Bug Fix-- Messages and Change Request paging issue is resolved.	We fixed the broken paging on the Message and Change Request page.
WISEid: Person Upload works for ID Agency Data Entry Role	Users with only the ID Agency Data Entry Role were having Person Upload faults due to the number of messages generated. We fixed the issue, so this user role can conduct Person Uploads.
WISEid: Update Merge timestamp method matches DPI data warehouse	For DPI Data Warehouse integration we have enhanced database timestamps to a supportable format for WISEid records.
WISEstaff: Added Edit Person button to send a user to the WISEid tab for a person	We added an Edit button on the WISEstaff tab Edit Staff page for personal information. Users can click this button and be automatically sent to the WISEid tab for the same person to edit Personal Information.
WISEstaff: Bug Fix-- Assignment records are no longer missing from snapshot because of a new validation.	We created second-level validation Error 6332 to notify users if they have previously uploaded data in the current year for a working school that later in the current year was updated to a closed school (shouldn't happen ideally, but has happened due to data replication issues in past). Closed schools in the current year can't be working schools.
WISEstaff: Bug Fix-- Empty contracts won't show.	In UI if you change Contract fields all to null, then the contract should not save instead of saving a Contract with no data in it.
WISEstaff: Bug Fix- - Local Use Contract file no longer faults if there's a 51-character error message with 101 char. in field. Message if it's too long now.	We corrected the logic and message so that Contract files allow up to 50 characters for the Local Use field and Assignment uploads allow 100 characters for Local Use as per specs. Violations of these limits previously resulted in no

	messages and file upload faults under certain circumstances, but this has been corrected.
WISEstaff: EPIC Data Quality Check #00 – Part 2 & 4 completed to create an interactive Welcome Page and added check marks illustrating the "Big Picture"	On WISEstaff we created an expandible interface for the Annual Staff Collection Roadmap. The roadmap shows basic steps of the entire staff collection process with due dates. ● Red means there are definitely issues to resolve. ● Green checkmarks indicate step is complete except in cases of Load Contract Data and Local Assignment Data, which indicate that we have at least one record of each. We leave that up to districts to determine if all records are present, as we have no way to determine if this is complete. ● Items with square boxes don't have any logical way for use to determine if the step is complete or even partially complete, so agencies should self determine. ● All steps that have a related page have web links. Future work will add dynamic progress arrow steps at the top and further info indicators to explain in detail each step required. This Roadmap is defaulted to minimized on the page, as it was determined not all districts want to view this on a regular basis.
WISEstaff: Fixed Save button on Enter Aggregate Staff FTE/ Aggregate Assignment	When a user saved an entry on the Enter Aggregate Staff FTE page, the user remained on the current page. Now a user is sent to the summary view of all Aggregate Assignments.
WISEstaff: Hotfix-- Corrected Audit results permission issue, so all roles can view audit results	We fixed issues preventing those without WISEstaff Agency Admin user role persons from seeing audit results. All WISEstaff tab users for a district can now

	view the audit results regardless of security role.
WISEstaff: Missing Entity IDs can now be downloaded.	We added **Download** on the WISEstaff dashboard for Missing Entity ID downloads in CSV format.
WISEstaff: Salary cannot be zero.	If a user enters zero in the Contract uploads or in the Contract UI for Contract Salary, null will be saved. Zero is not a possible value. Also, some source systems create Contract uploads with zeros instead of nulls, so this will also correct that issue. Additionally we completed a one-time clean up script to remove any existing zeros for Contract Salary.
WISEstaff: Validate Staff Data Acknowledged Warnings text has changed.	On Validate Staff Data we updated the text next to the checkbox that shows any warnings that were already acknowledged by an agency. It now says, "Show Acknowledged Warnings" to enhance clarity on what the checkbox does.
