Release Notes for 5/25/2017 WISEid/WISEstaff Production Release
(Core Apps Team Sprint 135 2-Week Work Cycle)

Feature Title	Notes
WISEid/WISEstaff: Logout is now working	We fixed an issue where the logout function wouldn't actually log users out of the application.
WISEid: Updated Person Change History with modifier when there's a change request	When a Change Request is auto approved, we now update the Person Change History audit log with Action of Change Request Auto Processed. When a Change Request is manually approved, we now update the Person Change History audit log with Action of Change Request Processed. Also, the person creating the change request change is now visible. In the next release we will backfill any missing data from the past.
WISEid: Hotfix-- Updated Logic Change Request Last Name	When a Change Request was generated for a legal name change, it was being fed directly into Other Names. We have fixed this, so these names do not go into Other Names. DPI Customer Support is also now working to review and possibly correct about 400 Other Names that might not be accurate due to mismatches and typos.
WISEstaff: Added Message and Change Requests link to WISEstaff	The Message and Change Requests page link already present on the WISEid tab is now also on the WISEstaff tab.
WISEstaff: Aggregate FTE decimal and text change	The Enter Aggregate Staff FTE now allows reporting of FTE decimal to the nearest hundredth place.
WISEstaff: Created process and database tables to populate annual staff reporting tables with final snapshot data each year	We created a job that can populate data for new annual Public Staff Reports coming in future releases. We will replace current static l file formats.
WISEstaff: Removed assignment number of classes and NCLB classes	For 2017-18 Staff collection we will not collect the number of classes anymore.

WISEstaff: Replaced Multi-Contract field deletion with single-contract deletion	When contracts are not needed because the staff person doesn't have an assignment type of 0 or 1 and is not subcontracted, we used to deliver separate messages 6361, 6325; 4101, 4107, 4350, 4440, 4220 for each Contract field. We now issue just one message, 4230, that the entire contract will be removed. This will greatly improve Contract validation message performance.
WISEstaff: Updated description lookup of Position Classification code D	Assignments of Classification Code D now have a description of "Aides/Paraprofessionals" wherever such descriptions are displayed.
