# Release Notes for 6/6/2017 WISEid/WISEstaff Production Release
## (Core Apps Team Sprint 136 2-Week Work Cycle)

| Feature Title | Notes |
|---|---|
| **WISEid/WISEstaff:** Logout now working in Prod | The Logout button now works correctly to log users out of the application. |
| **WISEid:** Added Local Person ID by Person Upload for next year's new agencies (136-8) | We've added Local Person ID by Person Upload to allow new agencies opening next year to do Person Uploads in the year prior to opening. |
| **WISEid:** Added Local Person ID in UI for next year's new agency | We added Local Person ID to allow new agencies opening next year to now attach Local Person IDs in the year prior to opening. |
| **WISEid:** Hotfix--Provided List of Denied Legal Name changes from other names (136-2) | CST will manually resolve issues where legal name changes were denied, but changes were put into Other Names even though they may be misspellings or incorrect persons to update. |
| **WISEid:** Hotfix--Updated Logic for Change Request Last Name (136-1) | Legal last name changes were being applied to Other Last Name automatically. Now they will not be applied to Other Last Name. |
| **WISEid:** Populated Person Change History with modifier for missing records (136-4) | In the last release we enabled Person Change History to show who uploaded changes that were applied to a WISEid person. This fix backfilled all the past records that were missing the modifier to have the person who uploaded the record change identified as the one making the change. |
| **WISEstaff:** Hot Fix--"Clear Non-Required Data" button works faster for large Info Message sets | We greatly improved the speed of the Validate Staff Data> Clear Non-Required Data button. We resolved issues where it would time out for large districts. |
