

Release Notes for 03/04/2021 WISEid/WISEstaff Production Release

Feature Title	Notes
<p>WISEstaff: Replace SSIS job to import Entity IDs and apply Entity ID matches with ap job that can have audit logging</p>	<p>Replacing the old Entity ID auto population job with two new jobs. The first job copies Entity IDs from the ELO daily replication data run once per day in the early AM. The second job populates in WISEid missing Entity IDs when there is one exact first name, last name and birthdate match in ELO. This job will also now log changes to the Person Change History Staff tab which the old job didn't and adds the Entity ID to the index so a person can be found by it in searches immediately. We plan to run this job hourly instead of once a day as it was in the past. This should make it so any Entity IDs populated should close any open Change Requests for the same Entity ID to be applied.</p>
