Release Notes for 10/2/2018 WISEid/WISEstaff Production Release
(Core Apps Team Sprint 170 2-Week Work Cycle)

Feature Title	Notes
WISEid: Added a CR Type filter to Agency Change Requests	We added a new filter of "Change Type" on the Messages and Change Request screen. This allows users to filter change requests by the type of change.
WISEid: Bug Fix--Change Request Download is no longer empty.	We fixed the Message and Change Request download, so it works correctly again.
WISEid: Bug Fix--Corrected loss of User Privileges after upload	We had an issue when large file uploads led to files losing their session privileges for a few minutes, but this has been resolved.
WISEid: Hotfix--Resolved Potential Matches updating fields issue	We fixed an issue that occurred when the email and WISEsecure Role values were not updated during a potential match and resolution to an existing person.
WISEid: Hotfix--Resolved Potential Matches search results issue	We had an issue where Local Person ID and WISEid were not in the search results for up to a day after when doing a potential match to an existing record. This was resolved.
WISEid: Increased Email Address to 255 characters	We increased the Email Address field to allow up to 255 characters. There was previous limit of 50, which was too low for some districts.

WISEstaff: Added ability to Replace All or Update Existing with file uploads	During both Contract and Assignment Uploads, you now have new options. ● One option is to "Update existing data for matching records". This updates records in a Contract upload where the WISEid and hiring agency are the same as existing records. It adds any new records that were not already present. ○ For Assignments, this option updates records where the hiring agency, working agency, working school, and assignment codes are the same as existing records, plus it adds new records that were not already present. ● The second option "Delete all data and replace with new upload" will delete all data in the current year for your selected upload type (contract or assignment) and replace it with what is in the current file upload. ● These options could save each district an hour or more of time when entering contract and assignment data
WISEstaff: Adjusted logic on error code 6360 to not show for charter school districts	We adjusted the validation warning 6360: "Your working agency has no staff with reading specialist assignments. If your agency has no reading specialist, acknowledge this

	warning. Otherwise, add reading specialist assignment(s)." Now the warning doesn't trigger for an agency that is a Charter or Charter Management Organization.
WISEstaff: Bug Fix--All Staff Report "Assignments Requiring License" filter works	We fixed an issue on the All Staff Report where the Assignment Requiring License filter was broken.
WISEstaff: Applied error code 3100 when contract or assignment is uploaded without Local Person ID	We added a new second level validation error 3100 that must be resolved when a person has a Contract and/or Assignment and no Local Person ID for that hiring agency. ● This usually means you haven't done your Person Upload correctly yet. ● This is needed so WISEdata Roster can have teachers' Local Person IDs connected for your agency. We recommend that you complete Person Uploads at least weekly during the school year to avoid issues in sending data or linking data with WISEdata.
WISEstaff: Archived & deleted production staff data >3 years	For performance reasons, we archived data older than the current data and two previous years' data in the system. Data is still available from the public staff reports beyond that.
WISEstaff: CMO adjustments - Assignment UI Working Agency	We modified the Assignment user interface (UI) so that CMOs work correctly.
WISEstaff: CMO adjustments - Assignment Upload	We modified the Assignment Upload so that the CMOs work correctly.

WISEstaff: CMO adjustments - Contract Upload faults	We modified the Contract Upload so that the CMOs work correctly.
WISEstaff: Bug Fix--FTE 5700 message triggers when it should.	We had an issue where the 5700 error about too many FTE statewide triggered for a person who had this issue, but the hiring agency didn't have any FTE in the specific agency to adjust. This message now works correctly and should only trigger when your hiring agency has FTE contributing to the FTE sum.
WISEstaff: Removed Entity ID from Contract upload download	We removed the Entity ID field from the Contract Upload and downloads. This field is only updated by Change Requests to DPI via a Person Upload or Person/Staff Edit UI.
WISEstaff: Require comments to acknowledge 4034 warning	When acknowledging the 4034 warning about a missing Entity ID, we now require comments about what is happening with this person's process to obtain an Entity ID and license. We have a prefilled list of statuses from which you can pick and then add to or edit. Choices include:: - Application is in process - Staff person has left the district - Staff person is on medical leave - Other
WISEstaff: Bug Fix--Validate Staff Data time stamp issue	We fixed an issue when at the beginning of the year, the Valiate Staff Data timestamp wouldn't populate correctly the first time validations were run.
WISEstaff: Validation Error for position 80 and 83 when school is not district wide	We had an issue when a staff assignment had a position 80 or 83

	assignment and the school was something other than 0000 district wide, then validation error 5878 should have triggered unless the working agency was a CESA, Charter, or state school. (It should not be displayed for CESA=01, State = 05, Charter = 49 and State Inst = 10.) This was resolved.
