

**Release Notes for 10/30/2018 WISEid/WISEstaff
Production Release
(Core Apps Team Sprint 172 2-Week Work Cycle)**

Feature Title	Notes
WISEid: Hotfix--Validation for email in Person Upload file to prevent multiple WISEids in file	We created a validation error that blocks a row if in the same Person upload file the same email address is used for multiple WISEids. This resolves the issue we had with multiple WISEid to email matches.
WISEid: Bug Fix--Person Uploads work properly.	A small number of districts had Person Uploads that would fault after the last release, but we fixed the issue.
WISEstaff: Hotfix--Resolved duplicate assignments created for private district	We had an issue when if a public district uploaded assignments and they had an agency code that matched a private district, then duplicate assignments were created in the private district. We resolved this issue. We also cleaned up data that shouldn't be in private districts and made sure it doesn't prevent future Assignment uploads.
WISEstaff: Updated hover-over verbiage for Sub-contracted question on Assignment Code List	On the Assignment Code list in WISEstaff and on the Public Staff Reporting page, we updated the hover-over for the subcontracted question to include Residential Care Centers. This feature is new this year.
