

**Release Notes for 11/15/2018 WISEid/WISEstaff
Production Release
(Core Apps Team Sprint 173 2-Week Work Cycle)**

Feature Title	Notes
WISEid: Bug Fix--Change Request comments refresh after adding a comment	We fixed an issue for district users where previously if they added a comment to a Change Request, it wouldn't show up on the Message and Change Request screen without manually refreshing.
WISEid: Removed multiple mother change requests	Due to user feedback, we have decided to remove the multiple mother change requests. They made up 66% of change requests, so this removes a burden from DPI and districts and should save districts an hour or more of time each month.
WISEid: Bug Fix--Block emails on multiple WISEids during a potential match	We found another way the same email could be applied to different WISEids in that it could happen after uploading but before the Potential Match review is complete. We fixed this by implementing a block of the same email to multiple WISEids. We will purge any emails leftover that are still connected to multiple WISEids. Emails should be district assignment emails which are specific to one WISEid.
WISEstaff: Bug Fix--FTE internal limit validation works properly now.	We fixed an issue where Error Message 5700 was saying the agency exceeded the multiple district FTE limit of 1.5 when the staff person only had one hiring agency and shouldn't have

	received it. This was preventing many districts from doing the preliminary certification, but it's been resolved.
WISEstaff: Added Certification "Available Starting" Dates to Roadmap	We added an "Available Starting..." comment to the Annual Staff Collection Roadmap with the open dates for both the Preliminary and Final Certification processes. These dates show when a district can first mark their agency certified, which makes prioritizing work and deadlines easier.
