

**Release Notes for 12/11/2018 WISEid/WISEstaff
Production Release
(Core Apps Team Sprint 175 2-Week Work Cycle)**

Feature Title	Notes
WISEid: Bug Fix--CR download works with Status set to All and DPI as dependent agency.	We fixed an issue with the Message & Change Request download that was not working when agency filters were applied.
WISEid: Hotfix--Removed multiple spaces between words in first and last names	We removed extra spaces from WISEid that shouldn't be in the system for first and last names. These included leading and trailing spaces, as well as multiple spaces between words in the name.
WISEid: Revised logic of Person Type field on Change Request filters	We revised the logic for all filters on the Message and Change Request page, so they will work correctly. This will help districts resolve change requests more quickly and to more easily identify change requests that need attention.
WISEid: Bug Fix--Rocketship Agency now showing	We had an issue in Find/Search Enrollment when if the Enrollment was for Rocketship Education Agency, it was not showing up. This was resolved.
WISEid: Bug Fix--UI for Enrollment displays agencies correctly.	We fixed an issue where some agencies were not showing for enrollments in the Find/Search Enrollment.
WISEid: Bug Fix--Uploading a Local Person ID in a different case no longer causes fault.	We had an issue where if you uploaded a Local Person ID with letters in it that

	differed only from the original based on the casing of letters, the system would fault. Now they are just ignored, so this issue is resolved.
WISEstaff: Added second Missing Entity ID counter bubble and descriptions to expanded Roadmap	We added features to the Annual Staff Collection Roadmap, including acknowledged vs. unacknowledged warnings.
WISEstaff: Added second Missing Entity ID widget to Dashboard	We broke out missing Entity ID warnings to unacknowledged and acknowledged widgets on the Staff Dashboard if they apply to your agency.
WISEstaff: Bug Fix--Breadcrumb navigation returns to WISEid Results instead of WISEstaff	We had an issue on the WISEstaff tab Results page when if you clicked the Errors and then went back, it would take you to the WiSEid tab. This was fixed.
WISEstaff: Bug Fix--Contract UI - Local and Total Experience validations working properly.	We fixed the min and max validation in the web application and upload, so we allow precise entries for Local and Total Experience $\geq .5$ to ≤ 99.5 .
WISEstaff: Created download of ELO data by mass Entity ID look-up	We created a new tool that will be turned on 12/13/18 to download licensing info in bulk in CSV format by using: comma or colon separated list of Entity IDs, Local Person IDs, WISEids, OR for everyone in your Staff List (anyone with a contract and/or assignment in your hiring agency). This new tool will help districts with licensing review and should save each district at least a half hour of time during licensing review.

<p>WISEstaff: Bug Fix--Salary Report Download error resolved</p>	<p>We fixed an issue for the Salary Report download to reflect filters applied.</p>
<p>WISEstaff: Bug Fix--Staff List now refreshing after a person is deleted</p>	<p>We had an issue when if you deleted a person from the Staff List, the page didn't automatically refresh showing the person removed. This problem was fixed.</p>
<p>WISEstaff: Updated error message 3100 verbiage to improve clarity</p>	<p>We revised the wording for error message 3100 to read "Staff person does not have a Local Person ID associated to your agency in their WISEid record, which is required for entry of contracts and/or assignments." WISEid Local Person ID is NOT to be confused with the ID fields on the Contracts and Assignments which was confusing a lot of districts. You need to conduct WISEid Person Uploads to resolve these errors.</p>
<p>WISEstaff: Hotfix--Corrected message 4230 verbiage</p>	<p>We changed Info message 4230 text to "Contracts are not required for staff with only Assignment Types 2, 3, or 4 or if all assignments are subcontracted. Contract will be removed during the reporting clean-up process. " Logic was always working this way during the Clear Non-Required data button process. However, the message was stating the reverse of what it should have said. Now this is correct.</p>
