

**Release Notes for 5/7/2019 WISEid/WISEstaff
Production Release
(Core Apps Team Sprint 184 2-Week Work Cycle)**

Feature Title	Notes
WISEid: Removed No Location Release from Identity API	We removed No Location Release from the Identity API. DPI is no longer tracking the Safe at Home program.
WISEid: Removed No Location Release from Resolve Duplicate	Since No Location Release is going away 6/10/19, we will no longer copy the field when a duplicate WISEid is merged to another WISEid.
WISEid: Added Multiple Birth field to Create Person UI	This new feature will be hidden until 6/10/19, but when it releases, users will see a new field in the WISEid creation User Interface screen: "Multiple Birth (e.g., Twins)". This will make it easier to identify siblings versus potential record matches.
WISEid: Removed No Location Release from UI	Since No Location Release is going away 6/10/19, we will no longer display it in the Edit and Create Person User Interface No Location Release. Values are still in the database and downloads, but they will be deleted after 6/10/19.
WISEstaff: New way of handling concurrent session timeouts	We implemented fixes for issues with system session timeouts: <ol style="list-style-type: none"> 1. Timeout popups are synchronized so that all pages should have the countdown timer appear at the same time

	<p>and have matching countdown values.</p> <ol style="list-style-type: none">2. When you want to end your session, you should be signed out and have all the other pages sign out as well. When you want to continue your session, it should be refreshed and all other page timeout popups should disappear.
