

**Release Notes for 6/28/2018 WISEid/WISEstaff
Production Release
(Core Apps Team Sprint 163 2-Week Work Cycle)**

Feature Title	Notes
WISEid: Hotfix--Fixed WISEid so users can View, Edit, Add, and Delete Local Person IDs	Local Person ID Edits, Add, and Delete functions in the User Interface (UI) were temporarily broken in the last full release. We fixed this issue.
WISEid: Added Change Request ID to Message and Change Request Download	We added the Change Request ID (unique ID of the entire change transaction) to the Message and Change Request Data. This will aid in troubleshooting issues and grouping rows when a single change request action creates multiple rows of changes because each individual change to a field has a row in the download.
WISEid: Change Request Download works properly	We fixed the Download on the Message and Change Request screen for the Field Name. Previously when multiple fields changed as part of the same Change Request, the same Field Name was listed on each row instead of each row being unique to the field changed.
WISEid: Hotfix--Populated WISEsecure Role based on 2017-18 final snapshot	We populated the WISEsecure Role field on the Staff type Local Person IDs based on the 2017-18 staff collection snapshot assignments. Ignore this field until WISEsecure launches.

<p>WISEid: Hotfix--UI creation of Person record no longer errors out around WISEsecureRoleID</p>	<p>We fixed an issue when after logging in to the WISEid application and immediately going to UI creation of a person, the system would error out. This was resolved.</p>
<p>WISEid: Person Upload Parent/Guardian name changes work properly</p>	<p>We fixed Person upload issues so that duplicate Parent/Guardians won't be created when the difference between uploaded values are just middle initials that match existing full middle names, no middle names, or middle initial plus or minus a period. Similar adjustments have been made to Multiple Mother Change Requests.</p>
<p>WISEid: Removed Gender and Race/Ethnicity Change Requests function</p>	<p>Gender and Race/Ethnicity changes no longer require a Change Request. This should eliminate 25% of all Change Requests. The reason for the change is race/ethnicity and genders are more fluid now, so the latest district should have the correct info.</p>
<p>WISEid: Revised non-voting Change Request rules for Messages & Change Requests</p>	<p>We removed the creation of a viewable Change Request from the system when a change didn't require a vote by other agencies. Also, we deleted the history of any Change Request that didn't require a vote from another agency. This will improve system performance and remove clutter of immediate changes that were already made.</p>
