Release Notes for 8/7/2018 WISEid/WISEstaff Production Release
(Core Apps Team Sprint 166 2-Week Work Cycle)

Feature Title	Notes
WISEid: Archived Older Change Requests	We created a job to archive Change Requests older than 1 year old. This should increase system performance and speed up the Message and Change Request page for large districts.
WISEid: CMO adjustments amd fixes	We fixed issues preventing CMOs from working correctly in WISEid. On the Change Agency screen, we created a new banner "Merged to CMO" for agencies that have merged into a CMO.
WISEid: Message and Change Requests page Requesting & Dependent Agency filters no longer missing agencies	We removed certain features on the Requesting Agency and Dependent Agency filters of the Message and Change Request page because they were causing a number of issues. The issues with available choices and correct data displaying for all users won't be resolved until we upgrade the programming infrastructure of the entire application. We will restore the removed type ahead functionality once we can upgrade the site programming.
WISEstaff: Dynamic Question rules copy previous year	We created admin functionality to copy year-to-year settings if an assignment dynamic question is turned on for a particular assignment code. This new functionality reduces the chances of misconfigurations by manual input.
