WISEdata Release Notes: 9/14/17

WORK ITEM	Description/Comments
WDP: Modified age calculation in 6481 and 6484	We modified the way maximum age is calculated in the validation rules 6481 and 6484. Now we use the student's DOB and school enrollment.
WDP: Count Inclusion rules 6601, 6621, 6381, 6385 are implemented and working correctly.	We retested count inclusion validation rules 6601, 6621, 6381, and 6385 after implementation for the new school year, and everything is working as it should.
WDP: Updated Oct. 1 CC Metrics & Export in WDP	We made minor changes to update the October 1 Child Count Metrics and Export file in the WISEdata Portal. These changes mainly affect the titles of the graphs/columns and the inclusion display in the sixth metric.
WDP: Updated 3rd Friday of September Metrics & Export in WDP	We made minor changes to update the 3rd Friday of September Metrics and Export file in the WISEdata Portal. These changes mainly affected the titles of the graphs/columns and the inclusion display in the sixth metric.
EdCred: New LEAs can be added properly.	We modified EdCred to ensure new LEAs can be added to our applications for the new school year.
WDP: Removed rule 6375	We removed validation rule 6375. This rule's job is now covered by other sSA effective date rules. It's currently active only for Choice schools now.
WDP: Rule 6424 is working properly.	We retested validation rule 6424 - 'The enroll date is invalid because the school was not open during that time', and it's working appropriately for both Choice and public schools.
WDP: Rule 6493 is working properly.	We retested validation rule 6493 - 'The resource, 'student Academic Record', is submitted with no associated data type, Diploma', and it's working

	appropriately for both Choice and public schools.
WDP: Rule 6494 is working properly.	We retested validation rule 6494 - Required field is missing, 'Credential', and it's working appropriately for both Choice and public schools.
WDP: Rule 6496 is working properly.	We retested validation rule 6496 - 'Term is expected to be 'Annual',' and it's working appropriately for both Choice and public schools.
WDP: Bug Fix--Rule 6506 works now.	We modified and retested validation rule 6506 - 'Private-paying student was submitted by another private school as an expected interdistrict transfer to your Choice district, system or school,' and it now works properly.
WDP: Rule 6574 is working properly.	We retested validation rule 6574 - 'Expected Transfer exit type invalid for student now known to be continuing in a private school as a private-paying student,' and it's working appropriately for both Choice and public schools.
Discipline: Rule 6699 is working properly.	We retested validation rule 6699 - 'Student discipline information was submitted by another district, but your district is accountable.' It's working properly now.
WDP: Rule 6599 works appropriately for public schools only.	We ensured rule 6599 on reporting disability will only run for public schools, as reporting disability is optional for Choice schools.
API: Rule 6481 will accept data as Null values instead of rejecting data	We changed validation rule 6481 to modify the data to NULL to allow the data into the data warehouse instead of rejecting it outright.
WDP: Bug Fix--Rule 6694 works properly now.	We had an issue with validation 6694 when there was one Incident and two Discipline Actions. When the Discipline Actions data was correct, it was still throwing a Warning when it shouldn't. It's now fixed.
WDP: Added School Year visual to Data Quality & Validation page	We added a floating school year near the top of the Data Quality & Validation page, so it's easier for users to know which school year's data is

	displaying.
WDP: Added modifier to Total Special Education Record Count statistic	On the WISEdata Portal Data Statistics screen, under 'Total Special Education Record Count', we added the following: (note: *count of isactive=1 discipline incidents for school year for LEA).* This way users have a better idea of the pending status.
WDP: Bug Fix--Attendance metrics graphs display appropriately now.	Attendance rate calculations for the metric charts were failing when the possible attendance = 0, and then the chart wouldn't load. This has been resolved.
Discipline: Added info to Discipline Metrics to explain metric's display	We added information to the Discipline Metrics in WISEdata Portal on the Data Indicators screen. Now users will be able to read more about what they see in each Discipline Metric and how to interpret that data.
Roster: Added school selection for Roster export	We added a school selection screen for the Roster export downloads. Districts can now select specific schools to download Roster exports, which can help with speed.
WDP: Student Detail Screen shows Count Inclusion factors and qualifiers	On the Student Detail Screen users can now see all the Count Inclusion determinants with symbols of a green checkmark or red universal "No" circle to show users why a count inclusion flag was marked as yes or no for a student.
WDP: Bug Fix--On the Student Details screen in the Student Associations box, data displays uniformly.	The Student Associations box on the Student Details screen was displaying in white instead of blue like the others, but this was fixed to all match.
Discipline: Bug Fix--Discipline Incident Export file displays information properly.	In the Discipline Incident Export file, "Student ID" was not displaying and "Has_DisciplineAction" status said "N" when there really was a Discipline Action. This was resolved.
Calculation: Revised Accountable School	We revised the calculation for the Accountable

calculation	School ID to ensure the sSEPA record matches up with the same enrollment timeframe.
Calculation: Bug Fix--Revised Reporting Disability calculation	The Reporting Disability calculation was incorrectly selecting public over Choice data. The calculation was reworked to fix this issue.
Calculation: Bug Fix--PPP setting is accurate.	The Parentally-placed Private (PPP) flag was incorrectly set when students changed districts, but the calculation was reworked to fix this.
WDP: Bug Fix--Rule 6381 working correctly now	Validation rule 6381 was throwing when it shouldn't, but this has been resolved.
WDP: Bug Fix--Rules 6424 and 6425 are working correctly now.	Validation rules 6424 and 6425 were looking at the wrong tables to check data logic and determine whether or not to fire, often firing incorrectly. This has been fixed.
WDP: Bug Fix--Discipline data now correctly displaying in Data Statistics panel	The Discipline data counts weren't matching between actual Discipline data and counts displayed on the WDP Data Statistics panel, but this was resolved.
WDP: Bug Fix--Validation Student List displaying appropriately	The Validation Student List grid wasn't always displaying, but this was fixed.
Discipline: Bug Fix--Discipline Incident Export displays disability value accurately.	In the Discipline Incident Export file, disability values were not maintained accurately, but this has been corrected to show the proper response for if the student involved has a disability.
