

WISEdata Release Notes: 1/16/18

Title	Description/Comments
<p>ETL: Bug Fixes--Imports and Roster checks working properly</p>	<p>We had a bug that when an import failed, it didn't bring some data into the database. The next time imports ran, it didn't select the modified records. We also had a bug with failed Roster error checks not running as often as needed. Both of these issues have been resolved.</p>
<p>Roster: Data Warehouse team has student section view.</p>	<p>The Data Warehouse team has a new Roster view for viewing Student Section.</p>
<p>WDP: Icon denotes Choice school elements in API views.</p>	<p>In the new Ed-Fi API views in the WISEdata Portal, we added an asterisk icon next to data elements that are specific only to Choice schools.</p>
<p>WDP: Improved performance for school selection</p>	<p>Previously, when users would change agencies and then try to select a school from the dropdown, the WISEdata Portal would slow down. We've improved performance with this, so users should be able to select a school without issue.</p>
<p>WDP: School filter option on multiple pages, allows for multiple selections</p>	<p>In WISEdata Portal, users can now filter by school(s) and have that school filter transfer from page to page, for example, Student Details and Export Data.</p> <p>Users are also able to select multiple schools from the district they are logged into. Depending on which page the user is on, when multiple schools are selected in the school filter, data from those schools populates correctly.</p>

	<p>Users do have the ability to reset back to the default to clear out school selections when they wish.</p>
<p>WDP: Bug Fix--Student Details screen and database information match and are correct.</p>	<p>We had an issue where the data in the database did not match the same data presented in the Student Details screen in the WISEdata Portal, but this was fixed.</p>
