

WISEdata Release Notes: 1/30/18

Title	Description/Comments
<p>WDP: Bug Fix--Academic Record has correct formatting in Student Details.</p>	<p>We had an issue with the Academic Record font of the Student Details screen in the WISEdata Portal, but it's been fixed. The data grid font and formatting is correct and consistent with other data views now.</p>
<p>API: Additional functionality in WDP vendor "sandbox" environment</p>	<p>Vendors using the "sandbox" environment to test the WISEdata Portal will now have display counts on page load, user access to logout from the clean-up page, resources grouped by domain, proper error messages when timed out or receiving other errors, and some communication on sSA records to let users know about deleting dependencies.</p>
<p>EdCred: Removed unused profiles and updated agency vendor selection page</p>	<p>We cleaned up profiles in the Ed-Fi Credentialing portion of WISEdata to remove unused profiles and make sure necessary ones are available. We also updated the LEA view of vendor selection, so it's easier to see which vendors have access to what data.</p>
<p>WDP: New validation warning 6739</p>	<p>We implemented a new validation warning 6739 - 'You've identified this student as a migratory child. Only students who have been federally certified as migratory children may be identified as migrant'.</p>
<p>WDP: New validation warning 6740</p>	<p>We implemented a new validation warning 6740 - 'Student is submitted by your district with both an active IEP and Section 504 plan which overlap for some or all of the school year'.</p>

<p>WDP: Removed ARM functions and menu option</p>	<p>For any users who previously had access to the ARM in the WISEdata Portal, the menu option has been removed and all functionality archived. Data previously displayed by the ARM is now available in the Student Details screen.</p>
<p>WDP: Added Info icon to Ed-Fi API view link</p>	<p>Now that we have the Ed-Fi API view link in various sections of the Student Details screen, we added an Info icon next to the links to explain to users why and how you would use the API view.</p>
<p>WDP: Filter views are consistent across pages.</p>	<p>We have ensured that the Filter views/options are consistent from one page of the WISEdata Portal to another, which should reduce any user confusion about the data displaying on each page.</p>
<p>WDP: Improved message and options when no results for a student search</p>	<p>When searching for a student in the WISEdata Portal, if no results are returned, you will see a message to that effect. However, if the student isn't found in WISEdata but is located in the Ed-Fi API, you will see a message specifying this. You will also have a link to view the student's data that's currently in the API, as well as the ability to trigger a manual validation to bring that data into WISEdata.</p>
<p>WDP: Student Details screen data now displays Created On and Modified On dates.</p>	<p>When viewing data in the Student Details screen in the WISEdata Portal, you can now view the Created On and Modified On dates for various records, such as the student programs and special education records.</p>
<p>DB: Bug Fix--Roster and Discipline logic now uses correct date range to check data.</p>	<p>Previously, Roster and Discipline validation runs used time logic to pull data that didn't always pull for the correct date range. This has been resolved and now uses correct</p>

	timing logic to check date ranges.
DB: Program info populating in database and added L1 validation index	In the database, we are now properly populating Category, Subcategory, and Data Areas for Programs. We also added an L1 validation index to better manage validations behind the scenes.
