

WISEdata Release Notes: 11/21/17

Title	Description/Comments
<p>WDP: Many validation rules were reviewed and turned back on.</p>	<p>We verified that all Expected Transfer, HSC, and Exit Type validation rules were ready and turned back on to help schools prepare for the December 5 snapshot.</p>
<p>WDP: Altered logic on rule 6597 to not throw one month early</p>	<p>We removed the logic in rule 6597 that previously threw the error one month prior to the student's sixth birthday because it was confusing to end users. Now the rule will throw only in cases where the LEA needs to update the current educational environment by creating a new sSEPA record.</p>
<p>WDP: Added columns to Mass Enrollment Export</p>	<p>We modified the Mass Enrollment Export file by adding columns for Repeat Grade Indicator and Choice Student Indicator.</p>
<p>WDP: New Special Education Export</p>	<p>We have a new Special Education Export file in the WISEdata Portal. The data pulls from the student and enrollment records, as well as the student's special education program association (sSEPA record), including disability information. One student could have more than one record. LEAs can use the filters on the Export Data page to filter results set in the export. Note, because School ID wasn't required on the sSEPA until 2017-18, any School ID or school enrollment-level columns may be empty for 2016-17.</p>
<p>WDP: New Student Characteristics Export</p>	<p>We created a new Student Characteristics Export file in the WISEdata Portal. The data pulls from the student record and student</p>

	<p>characteristics, e.g., Homeless, Immigrant, Migrant, SATA. We will use the calculated WI DPI disability value. The export includes Native Language and Visa Type data, as well, so note that a student could have more than one visa code. LEAs can use filters on the Export Data page to filter results set in the Export.</p>
<p>WDP: New Student Program Associations Export</p>	<p>We created a new WISEdata Portal Student Program Associations Export file. It will pull student and school record information and active program associations, e.g., Third Party - CESA Third Party - Other, Section 504 Placement, Coordinated Early Intervening Services, ELL Served. Note, one student could have more than one record if he or she is in multiple programs or has more than one entry for the same program in a school year. LEAs can use the filters on the Export Data page to filter results set in the Export.</p>
<p>WDP: Bug Fix--Validation text now displays correctly in WISEdata Portal and exports.</p>	<p>We resolved an issue where certain validation messages weren't matching between the text in the portal and in the export. Now the message text presents in the correct format in all locations.</p>
<p>WDP: Bug Fix--Rule 6697 throws properly.</p>	<p>Validation rule 6697 wasn't throwing appropriately for 2016-17 records, but this has been fixed to throw when it should.</p>
<p>WDP: Modified logic for rule 6576</p>	<p>We modified the logic for validation rule 6576 regarding intra-district expected transfers.</p>
<p>WDP: Rule 6659 now has a critical status.</p>	<p>We updated validation rule 6659 to have a critical status. Validations with critical status are errors that must be resolved for the data to be accepted into the WISEdata Portal and</p>

	passed into WISEdash.
WDP: Bug Fix--Rule 6673 throws properly.	Rule 6673 wasn't checking for the correct sSEPA record when PPP=NO because it was failing to consider Effective Dates logic. This issue has been resolved.
WDP: Bug Fix--Records will only display once.	We had a bug that when there were multiple records with the same First, Last, and School names, the message grid displayed multiple times because of paging issues. We included the WISEid in the record order to fix the issue.
WDP: Displayed schools match school year.	We updated WISEdata Portal to populate the correct schools whenever a user changes the year selection, so users see the appropriate school results for that school year.
WDP: Added Student Detail Search Message Type filter	<p>We added a Message Type filter 'Student Detail Search' page in WISEdata Portal to filter by:</p> <ul style="list-style-type: none"> - All Students - Students with Errors - Students with Warnings - Students with Errors or Warnings <p>When the 'All students' option is selected, the following are displayed:</p> <ul style="list-style-type: none"> ● students with errors, warnings, or info messages and ● students without any errors, warnings, and info messages. <p>When 'Students with Errors' is selected, then only students with errors are populated.</p> <p>When 'Students with Warnings' is selected, then only students with warnings are populated.</p> <p>When 'Students with Errors or Warnings' is</p>

	selected, then students with errors or warnings are populated.
WDP: New Validation Message Export	We added a new export for all Validation Messages by Student in the WISEdata Portal, so users can filter the students by message type, etc.
WDP: Student Detail Screen now shows validations.	In the WISEdata Portal Student Detail screen within each data panel, 'Enrollment', 'Student', 'SPED', 'Discipline', etc., you will now see a display of the student's errors and warnings that apply to this data area. It will show the validation message row with short and long text and KBA link. It will default the sort order in each context by errors, then by error validation number, and then by warning with an icon to show whether it's a warning or error.
WDP: Bug Fix--Data Statistics info displays without issues.	We resolved a bug that was showing an HTML error in the Data Statistics panel.
WDP: Added fields to Student Detail screen	<p>We added fields to the WISEdata Portal Student Detail screen.</p> <ol style="list-style-type: none"> 1. Private School Choice Program Participant was added only for private schools in the General section of the Enrollments section. It'll populate as 'Y' or 'N' or blank when NULL. 2. The student's Resident District field was added for both public and Choice schools to the Student section. It will populate the 'Name' of the district. 3. The screen will always show the Student Academic Record tab and content with the added field of 'Diploma Award Date'.
WDP: Added Transfer Response column	We added a Transfer Response column to the Expected Transfer Response screen.

<p>WDP: Bug Fix--Rule 6696 displays warning appropriately now.</p>	<p>Rule 6696 warnings weren't clearing when records had multiple disciplines and the discipline date was not overlapping. This warning has been resolved to display properly.</p>
<p>WDP: Improved speed and performance for validations</p>	<p>Enrollment validations were sometimes timing out, but we have modified the validation logic to make the process run much faster.</p>
<p>WDP: Added ability to backdate SIS vendor imports</p>	<p>Occasionally a vendor deletes or adds data that accidentally orphans parts of records. To remedy this, we added the ability to backdate a specific ETL/year to re-import from a specific time. This will allow us to capture the full scope of changes in a single import and then re-run that import.</p>
<p>WDP: Active School Years can no longer be deleted.</p>	<p>Active School Years were sometimes deleted when values were missing, but this has been resolved so that the application will still function properly around active school years.</p>
