

WISEdata Release Notes: 2/13/18

Title	Description/Comments
WDP: Bug Fix--School Year maintained across pages.	We had an issue where the selected school year was not retained across Data Quality, Validation Message, Export, etc. pages in the WISEdata Portal, but this has been fixed.
WDP: Bug Fix--Rule 6740 works properly now.	We had a bug with L2 validation 6740 throwing when it shouldn't, but the rule is working properly again.
Roster: Bug Fix--Resolved mismatched Roster records	There were 12 mismatching course offerings records to 33 student section records due to letter case and trailing space issues. We have corrected the issue.
Discipline: Incident Export has student's name.	We added the Last Name, First Name of the student tied to an incident to the Discipline Incident export file.
WDP: Bug Fix--Must log in again after session expires for exports	We had a security issue where you could still download export files after a WISEdata Portal session expired. We've resolved this to ensure security of the data that's downloaded in the WDP export files.
WDP: Student Detail sections with validations display as expanded by default	We enhanced the Student Details screen to make it easier to see areas with validation concern. Now when you view the Student Details screen, any Details section that has validations associated will be expanded automatically by default when looking at the student's screen.
WDP: School Year drop-down menu has current year at the top	We adjusted all the school year drop-down menus to show years in descending order, meaning the current year is on top followed

	by the next most recent year and so on.
WDP: Row order in Student Details matches sort order in Ed-Fi API.	We adjusted the sort order in the WISEdata Portal, so the row order in the Student Details screen now matches the row order in the Ed-Fi API. This will make it easier for users to cross-examine data.
WDP: Enhanced Student Not Found message	The Student Not Found message used to be on the bottom in plain text, but we have enhanced it for noticeability. Now it appears at the top of the page with color.
WDP: Clickable Agency link in Student Details	Anywhere another LEA is listed on the WISEdata Portal's Student Detail screen, including Enrollment History, users can now click the Agency link. The Contact form will pop up for contact info for the current year's primary contact.
WDP: Calculator icon displays by all DPI-calculated fields	We reviewed and added the calculator icon, when necessary, to all data fields that are calculated by DPI and shown to the user for reference, not as data submitted from the SIS.
Discipline: Incident ID added to Discipline Action rules and export	Users were finding it difficult to identify the Incident ID to which an action belongs, so we added the Incident Identifier to the validation message grid for all the Discipline Action rules. We also added it to the export.
WDP: Bug Fix--Expected Transfer Response now shows the description in Student Details.	We had a bug on the WISEdata Portal Student Details screen where the 'Expected Transfer Response' was showing the code value instead of the description. It now shows the description.
