

## WISEdata Release Notes: 3/28/17

WORK ITEM	Description/Comments
<p><b>*Note, the following Roster items are listed to make you aware of development progress, but Roster is not yet released for use.</b></p> <p><b>Roster:</b> Verified certain staff section association fields</p>	<p>Profiles were created for staff associations to allow only certain fields to be edited or deleted in the API.</p>
<p><b>Roster:</b> Adjusted student section association profiles</p>	<p>We adjusted student section association profiles and endpoint items in Roster to allow only certain fields to be edited or deleted in the API. We also added unit tests and included endpoint information tables and field values that the database can accept.</p>
<p><b>Roster:</b> Added course program codes to type tables to enable SIS progress for testing and development</p>	<p>Details on the course program name and type were created and added to the type tables, so SIS vendors can submit their references in section endpoint for development and testing.</p>
<p><b>Roster:</b> Staff data is pulling from WISEid over to WISEdata Portal.</p>	<p>Staff data currently housed in WISEid is pulling into the WISEdata Portal to pre-populate certain Roster fields if there is an attached Local Person ID for the agency. Note, you will need WISEids for all staff.</p>
<p><b>WDP:</b> Validation will run nightly every 24 hours.</p>	<p>With the implementation of manual validation, we still need to ensure districts are validating data frequently. Now a validation will run on agencies every 24 hours to ensure all agencies are validated nightly (3 am), regardless of manual validation.</p>
<p><b>WDP:</b> You can now trigger manual validation.</p>	<p>In WDP, you can now go into the Data Statistics section and click the Run Validation/Queue button to manually queue up your data to run through a new validation. Data will automatically run through validation nightly now as well, so there's no need to push this button with each single change. Reserve the manual validation push for times when you have made substantial changes to your data.</p>

<p><b>WDP:</b> Audit tracking added for investigation into manual validation runs.</p>	<p>With the inception of manual validation, we added a few audit fields that will be useful for DPI staff to investigate problematic validation runs, like who ran a job or when it stopped.</p>
<p><b>WDP:</b> Modifications were made to the Data Statistics views.</p>	<p>The WDP Data Statistics section was modified for ease of use, such as moving Total Count and changing choice school displays.</p>
<p><b>WDP:</b> Bug Fix--WDP Stats view now shows null Economic Disadvantage values</p>	<p>If an economic disadvantage value was null, it was not displaying in the WDP Stats, but this has been fixed.</p>
<p><b>API:</b> Bug Fix--Total days fields can no longer have negative entries.</p>	<p>We fixed a bug that was previously allowing negative values for total day fields, such as attendance and instructional days.</p>
<p><b>WDP:</b> Bug Fix--Last Modified stat should update at the correct times now.</p>	<p>The Last Modified stat was updating for all records every time a calculation was run, but now it should only display the last time a record was actually modified.</p>
<p><b>EdCred:</b> EdCred modifications now allow SIS vendors to work seamlessly with a special education vendor.</p>	<p>We update EdCred so that when a user picks a special education vendor to add, the system should flip the SIS vendor to a profile setting that will accommodate the special education data.</p>
