

## WISEdata Release Notes: 4/13/17

| WORK ITEM  | Description/Comments   |
|--|--|
| <p><b>*Note, the following Roster and Discipline items are listed to make you aware of development progress, but they are not yet in use in your SIS.</b></p> <p><b>Discipline:</b> Modified Term Type metadata was added to the API database.</p> | <p>Modified Term Type metadata was added to the API database descriptor/type table(s) so that we have the correct values for sending data to the API.</p>  |
| <p><b>Roster:</b> Brought in staff Education Organization Assignment Association references</p>  | <p>Per SIS vendor input, DPI brought in staff Education Organization Assignment Association, including staff position and begin date. We also modified what an educational organization can view about staff data.</p>   |
| <p><b>Roster:</b> Created weekly Roster imports separate from the rest of the data imports</p>   | <p>DPI Roster data was broken out to a separate job stream because there are no L2 validations or data metrics this year. It's scheduled now as a weekly automatic ODS import but will still allow the ability to trigger manually in WDP.</p>                     |
| <p><b>WDP:</b> Bug Fix--Error 6618 is now throwing appropriately.</p>  | <p>6618 was throwing incorrectly. Now if the span of enrollment (entry date/exit date) doesn't include 2nd Friday of Jan. or 3rd Friday of Sept. and Choice participant is False or NULL, then 6618 Error message <b>should no longer appear</b>.</p>              |
| <p><b>Roster:</b> Any Roster endpoint with school year or a school year reference now has a rule to prevent inputting the wrong year.</p>  | <p>Any Roster endpoint with school year or a school year reference now has a rule to prevent inputting the wrong school year of data going into the Ed-Fi API database that doesn't match that school year.</p>  |
| <p><b>Roster:</b> Roster only allows one program reference at a time to avoid section association issues.</p>  | <p>Programs on the sections endpoint allow one section to be associated with multiple programs at the same time. Since there are no rules that will be implemented this year for Roster, we restricted programs to only allow one program reference at a time.</p> |
| <p><b>Roster:</b> A SIS can no longer delete an sSA if there's a referenced student section association.</p>   | <p>We now have an L1 rule that will throw when a SIS tries to delete an SSA that has an associated studentSectionAssociation. There is also now an L1 message that explains why they cannot delete</p>   |

|   |  |
|---|--|
|   | it.  |
| <b>Roster:</b> Student School Association reference was added to allow for restricting begin and end dates of a section association to the same time periods in the school association. | We added a studentSchoolAssociation reference in the studentSectionAssociation endpoint. Now there is an L1 rule to restrict the begin date and end date on the studentSectionAssociation from being outside of the entry and exit date on the studentSchoolAssociation reference on the same endpoint. If the end date or exit date is empty, it will use 6/30 instead. |
| <b>WDP:</b> A single WAMS account with access to multiple agencies can now access the app without seeing the Acknowledgement Screen each time.  | Before a single WAMS account that had access to multiple agencies was not able to get past the Acknowledgement Screen without acknowledging each time. This is fixed now.  |
