

WISEdata Release Notes: 12/18/18

Title	Description/Comments
WDP: Enhanced validation email notification process	We changed the Queue Import & Validation email request process, so users will receive an email when the job they queued is complete, regardless of SYSTEM jobs. This will reduce confusion about the estimated time for their data to be validated.
WDP: Added Work in Process Bookmark filter	We added a 'Work in Process' bookmark filter on the Validation Message page so that only messages with a bookmark will display. This way users can easily find the ones they've tagged to continue working on them. The enhancement should save districts about 5-10 minutes of searching time when working on validation resolution.
WDP: Bug Fix--Projected Validation Start displays correctly.	We fixed a bug that the Projected Validation start date was not working as expected. The displayed start time should now be an accurate prediction.
	*The bulk of work consisted of 2019-20 work on the new Finance application and API v. 3.0.
