

WISEdata Release Notes: 1/7/20

Title	Description/Comments
WDP: New validation message exports	Per user request, we've added two new validation message exports, School Roster and Student Roster, to help you troubleshoot roster errors and warnings. You can download and explore these new exports on the Exports screen in WISEdata Portal.
WDP: Acknowledged warning messages appear on the Student Details screen	You can now see acknowledged warning messages on the Student Details screen, which can help you review or un-acknowledge these warnings if necessary.
WDP: Rules 6575 and 7112 logic update	Rules 6575 and 7112 now look at the expected transfer district instead of expected transfer school. This change was made because transfers out of the district are not required to submit an expected transfer school.
WDP: Rule 6659 now fires appropriately	Rule 6659 previously fired for DOC and DHS schools, when it should only fire for state schools. This issue is now fixed.
WDP: Bug Fix - Rule 7113 fires for the appropriate agency	Previously, rule 7113 could fire for the wrong agency instead of for the expected transfer school. This issue is now fixed.
WDP: Bug Fix - Error icon now appears in Student Details enrollment grid	Previously, the error icon didn't appear in the enrollment grid on the Student Details screen when an error message existed. This issue is now fixed.
WDP: Bug Fix - Error message now appears correctly in Student Details roster section	Previously, an error icon could appear without an error message in the roster section of the Student Details screen. This issue is now fixed.

WDP: Performance Improvement - Rules
6752 and 6766

Previously, rules [6752](#) and [6766](#) could slow down the validation queue. This issue is now fixed.
