# WISEdata Release Notes: 2/11/20

| Title | Description/Comments |
|---|---|
| **Ed-Fi Credential:** Agency ID now visible on Agency page | You can now easily find your agency's ID (also known as the LEA ID) in Ed-Fi Credential. To do so, log in to Ed-Fi Credential and go to the Agency page, where you also go to find your agency's API credentials. |
| **WDP:** New validation message exports | We've created two new validation message exports to help you quickly analyze and address validation warnings for specific types of data. The new exports are:<br>● Validation Message - Discipline, which includes data for discipline incidents, associated students and behaviors, and discipline actions.<br>● Validation Message - Other Programs, which includes data for homeless, food service, CTE concentrator, and non-course related certified/non-certified programs. |
| **WDP:** Validation rules 7099 and 7116 now apply in API version 3 | Validation rules 7099 and 7116 now apply to data in v3 of the WISEdata API, and now apply to data from the 2019-20 school year onward. |
| **WDP:** Validation messages for rule 7116 appear in Roster panel | Previously, validation messages for rule 7116 appeared in the Enrollment panel. Because the rule pertains to grades, it now shows validation messages in the Roster panel like similar rules. |
| **WDP:** Performance improvement for rule 6774 | Validation rule 6447 now runs more quickly when you validate your data. |

| | |
|---|---|
| **WDP:** Bug Fix - Some Choice schools had public school data groups on the Home page | Previously, some Choice schools saw data groups on their WISEdata Portal home page for public schools instead of Choice schools. This issue is now fixed. |
