

WISEdata Release Notes: 2/12/19

Title	Description/Comments
API: Bug Fix--Program data available to SIS	We had a bug where one of our SIS vendors was unable to access the available Program data, but this was resolved.
EdCred: Added additional special education vendor views in Ed Cred	To accommodate special education-only SIS vendors' needs to access Discipline data, we added an additional view in Ed-Fi Credential. This will streamline data submission for districts using special education SIS vendors.
WDP: Bug Fix--School Type filter works and displays consistently in charts, validations, and exports.	<p>We had School Category Type filter issues where users couldn't always select the School Type they wanted. This bug was fixed.</p> <p>We also adjusted the charts for these School Type categories to display this data consistently in addition to updating related validation messages for consistency. Lastly, we updated the exports for consistent School Type terminology. These updates should reduce user confusion when comparing values on different screens and exports in the WISEdata Portal.</p>
