WISEdata Release Notes: 2/26/19

Title	Description/Comments
WDP: Updated logic for rule 6607	Validation rule 6607 was throwing for agencies that are not expected to submit WISEdata (e.g., private non-choice schools). We modified the logic, so this rule throws appropriately.
WDP: Bug Fix--Rule 6769 works correctly.	Validation rule 6769 wasn't throwing correctly because it was incorrectly displaying for DHS, but we've tweaked the logic. Now the rule will work properly.
WDP: Updated logic for rule 6871	We modified the logic for validation rule 6871 to throw appropriately.
WDP: Bug Fix--Rule 6685 throws correctly.	We had an issue with validation 6685 not throwing properly because the DPI calculation wasn't checking the correct record. This was resolved, so the rule works.
WDP: Updated logic for 6766	Rule 6766 was throwing in advance for terms that hadn't started yet. This posed an issue for schools who like to enter info before a term begins, so we updated the logic to throw after a session starts.
WDP: Improved speed of rule 6767	Validation rule 6767 was taking a long time to run, so we increased performance speeds and then turned the rule on again.
WDP: Improved speed of rule 6768	Validation rule 6768 was also taking a long time to run, so we increased performance speeds and then turned the rule on again.
WDP: Added DPI Course Code column to Course Offering details	We added a DPI Course Code column to the Course Offering details. This would show for

	rules like 6797 and 6798 to help users more quickly determine to which code this relates.
WDP: Bug Fix--Roster Logical Section export works.	We had issues with the WISEdata Portal export for Roster Logical Sections directing users to a blank page. This was fixed to show the Roster exports properly.
