

WISEdata Release Notes: 3/12/19

Title	Description/Comments
WDP: Updated logic for rule 6607	We modified the logic for L2 validation rule 6607 to not throw for fully private schools that do not submit WISEdata.
WDP: Bug Fix--Discipline graph displays correct metrics.	We had a bug when a user would view the discipline data graphs, the Total Days Removed by Grade Level did not match the Total Days Removed by Disability Status when there were .5 days. This bug was resolved.
WDP: Bug Fix--Career Education Programs export displays correctly.	We had an issue in the WISEdata Portal Exports where the Begin/End Dates were missing on Certified/Non-Certified Career Education Programs exports. We added the Begin and End Dates to resolve the issue.
WDP: Clicking validation takes users to pre-filtered messages on Validation Messages page.	As requested by districts, we implemented a new filtering feature in the WISEdata Portal. Now when you click on the Error, Acknowledged Warnings, or Unacknowledged Warnings, you will be directed to the Validation Message page pre-filtered to that specific message type. This makes navigation in the application easier and should save users a few minutes of time for each instance when they work on validation resolution.
