WISEdata Release Notes: 4/7/20

Title	Description/Comments
WDP: Validation Jobs page now shows when there is a pending validation	You can now see if there's a pending validation job before you queue a new validation on the Validation Jobs page.
WDP: Bug Fix - Data now appears appropriately in the Discipline section of the Student Details screen	Previously, an issue could cause the Discipline section of the Student Details screen to show no data even if data existed. This issue is now fixed.
WDP: Bug Fix - Queue Import & Validation button now disables when appropriate	Previously, the Queue Import & Validation button on the Validation Jobs screen would remain active if a user queued the validation job then refreshed the page before the validation job was complete. In this scenario, the Queue Import & Validation button should be disabled until the validation job has run. This issue is now fixed.
WDP: Bug Fix - Validation rule 6696 now fires correctly	Previously, validation rule 6696 could throw an error when its conditions weren't met. This issue is now fixed.
WDP: Bug Fix - Validation rule 7114 now fires correctly	Previously, validation rule 7114 could throw an error when its conditions weren't met, or could fail to throw an error when it should. This issue is now fixed.
WDP: Bug Fix - Program panel for Choice schools now shows the correct time stamp for data being submitted	Previously, the Program panel could show that no data was received for a Choice school even if data was sent. This issue is now fixed.
WISEadmin Portal: Bug Fix - Duplicate data errata submissions no longer occur	Previously, a user could accidentally submit duplicate data errata submissions by clicking the Submit button multiple times. This issue is now fixed.
