

WISEdata Release Notes: 6/4/19

Title	Description/Comments
WDP: Bug Fix--Rule 6752 throws appropriately.	We had an issue with validation rule 6752 not throwing correctly because it wasn't always accounting for Carl Perkins districts, which it needs to check. We modified the logic to resolve the issue.
WDP: Bug Fix--Acknowledgment functionality works correctly.	We had a bug from the new validation messages aging feature where users couldn't do a mass acknowledgment of warnings. The system was sorting the aging days instead of checking the acknowledgment box, but this was fixed.
WDP: Bug Fix--Discipline charts display.	We resolved a bug with the WISEdata Portal Discipline charts 5 (Days Removed by Grade Level) & 6 (Days Removed by Disability Status) missing. You can now review all the Discipline metrics.
	*API v.3 development continues.
