WISEdata Release Notes: 7/3/18

Title	Description/Comments
WDP: Leap Year birthday calculations work correctly now.	If a student's birth date fell on 2/29 in a non-Leap Year, the system was previously considering 2/28 as the student's birth date, which caused issues in the logic. In the above case of Leap Year birthdays, we've modified the system now to look at 3/1 as the birthday in a non-Leap Year. The 3/1 date logic impacts L2 rule calculations, exports, and views in the WISEdata Portal that show the birth date sent from your SIS.
WDP: Name and Birth Date logic changes for rules 6394 and 6396	We have modified the logic for L2 validation rules 6394 and 6396 regarding Name and Birth Date changes. ● 6394 will be a 'critical' error type to raise awareness, but it will not be rejected from the data warehouse if incorrect as with other critical errors. The data warehouse will use the WISEid birth date as its source, but WISEdata will continue to use what's received in the student record. This means the Count Inclusion calculation is based on the WISEdata DOB still. ● 6396 will be an error but not marked as 'critical'.
Roster: Added additional Grading Period Types	We've added additional Grading Period options to the API for sending Roster data. New options include: **Code** **Description** ● 21 Grading Period 1 ● 22 Grading Period 2

	- 23 Grading Period 3 - 24 Grading Period 4 - 25 Grading Period 5 - 26 Grading Period 6 - 27 Grading Period 7 - 28 Grading Period 8 - 29 Grading Period 9 - 30 Grading Period 10 - 31 Grading Period 11 - 32 Grading Period 12
WDP: Added Program Type and End Date to the validation message grid	We added Program Type and End Date fields to the validation message grid for student program association (sPA) rules, including rules 6762 and 6763.
WDP: Bug Fix--Choice schools only see exports valid for Choice schools.	Previously Choice schools could see special education exports that were only for public schools, but we have altered the Exports page to hide the Special Education Category Type for Choice schools. Now Choice schools should only see exports that apply to Choice schools.
WDP: Updates to Roster Staff Section Association Export	We added new fields of 'Begin Date' and 'End Date' on the Roster Staff Section Association Export.
WDP: Updates to Roster Student Section Association Export	We updated the existing Roster Student Section Association Export to include a key to the 'logical class' (your classes offered), so users are able to correlate this export data with the newly planned export 'Roster Logical Class Summary'. The key will be a random number merely used for matching purposes.
WDP: Improved speed on Validation Messages page results	Because data imports have been running at 20+ minutes on average, users were experiencing longer wait times accessing the

	Validation Messages page. We've made some changes to improve the speed of returning results on the Validation Messages page.
WDP: 2018-19 Courses pushed to production	We've opened the 2018-19 API and have pushed 2018-19 Courses to production. You should be able to view and/or download the updated courses on the Courses data element page.
Notable DPI Web Page & Documentation Changes	- Last Evaluation Date data element page: updated definition and added an FAQ item - WI DPI Civil Rights Data Collection (CRDC) 2017-18 - KBAs added for some Level 1 errors (and more to come in the future)
	*The majority of development work is continued efforts on 2018-19 changes for Roster, Career Education, and the new Home page in the WISEdata Portal.
