Release Notes for 12/17/2015 WISEid/WISEstaff Production Release (WISEid Core Apps Sprint 99)

Feature Title	Notes
WISEid: Update the Upload Validation to detect Multiple Identical Person Records entry	Created validation first level error when person is duplicate first, middle, last, suffix, birthdate in file. If you really have new two people with all these fields the same you will have to enter them through the UI as 99.9% of the time it is really an incorrect duplicate.
WISEid: Reload Student Data into WISEid with most recent demographic info Part 1	Update WSLS people with changes since the last WSLS upload of student data.
WISEid: Download Transaction History and Results Download - Parent/Guardian data	Added the Parent/Guardian and Local Person ID Key Type to the Download Transaction History CSV download. Parent/Guardian is listed only when it was in an upload and only for the row that contains the upload person record. Because a WISEid person can have unlimited number of Parent/Guardians we can contain in this download additions by UI. Also, added these fields for the Results page Download button download csv link.
Staff: Add missing assignment and contract fields to snapshot	Snapshots were missing Assignment fields: Local Use, and Local Assignment Title. This has been corrected to include this data for future snapshots.
WISEid: Create 'Undo Merge' status	Sometimes DPI Customer Support reps makes WISEid person merge mistakes and there is no way to undo the merge. They now have this ability and should be able to fix past merge mistakes.
Staff: Message Contract Race, Ethnicity, Gender and DOB mismatch in Validate Staff	Messages about Contract Race, Ethnicity Gender and birthdates

	mismatches were generated at time of upload, but may not be true as of current time. We moved these messages out of the Validate Staff Data message to the Results Download file for Contracts into the MessageText column.
STAFF: Validate Staff Data West Allis -West Milwaukee District - conflicting messages	Due to system still running validation user would conflicting messages about if there validations were resolved. We revised the Validate Staff Data so the status, counts and button are all next to each other at top of the grid. We also removed the second Refresh Validation button. When Validation is still running from a previous attempt button will show it is still running and prevent clicking multiple times when validation for that agency is still running.
STAFF: Hotfix Validate Staff Data errors appearing and disappearing	Due to system still running validation user would conflicting messages about if there validations were resolved. We revised the Validate Staff Data so the status, counts and button are all next to each other at top of the grid. We also removed the second Refresh Validation button. When Validation is still running from a previous attempt button will show it is still running and prevent clicking multiple times when validation for that agency is still running.
STAFF: Edit Assignment Ui Clear non-required grades	Implemented clearing of non-required grade levels for district or school if the user is on a single Assignment record in the Assignment UI when they click save button. This is because some users edit and correct one assignment at a time and there is no way to

	deselect grades that were uploaded, but not valid. They do get removed in the Clear Non-Required Data button function for the Validate Staff Data screen agency wide, but there was no way to remove them on a single record until this fix.
WISEstaff: Change Validation rule to Allow Contract Days Greater than zero (0) and less than or equal to 365	Found users were able to upload negative numbers and it was not caught in first level Contract upload error validation. Now user can only upload numbers null or 0 to 365, otherwise they get an upload error for that row which they must correct and reupload.
WISEstaff: Update the UI to stay on Assignment Page when secondary validation errors occur	When an Assignment is modified in the Assignment UI and an validation error results from changes by the user it will display them at time of Save button push. User can push Cancel button to ignore and leave them there or they can fix them and Save to save correct error free Assignment record.
WISEstaff: Staff Download by Local Person ID- Generate Empty File with header and error message When No Staff Exist	When the Staff Download by Local Person ID contain no rows of data the file will no longer be empty. File will have column headers and a message in the first row that says "No staff records currently exist for this school/district." Eventually we will do similar for other download files to solve frequent question of why do I get a blank file with no data when I download a file.
STAFF : Hotfix 5830 should be a warning that needs ack. not a hard error.	Validation message 5830 " Elementary 53-0050 assignment exceeds the limit of 4 grade levels" was converted from an Error to a Warning that can be acknowledged. We found there are

	cases where some staff are able to teach over 4 grade level with an assignment of 53-0050.
Staff: Hotfix Assignments Upload Faults	Some districts had Assignment Upload faults after the last fixes. We found a new source of faults and fixed as a hotfix.
STAFF: Bug hotfix FTE validation missing	Error 5700 stopped working after a fix last deployment. We had to do a hotfix to restore it.
STAFF: Hotfix Bug Contract Data Deletion when assignment type 1	Fixed a number of issues. ISSUE # 1: When a user was editing Assignments in the UI the Clear Non-Required function was running on Save button click. We removed this it was deleting Contract data before user could finish their assignments for a person which may require a Contract. ISSUE #2 Person with Assignment 9-0000 (type 1) And 98-9077 (type 2) get all info message contract not need messages (4220, 4440, 4350, 4107, 4101, 6325) when they shouldn't. The type 1 should prevent these messages from being displayed and clearing out data during the Clear Non-Required Data function. ISSUE #3 Assignment 09-0000 did not have the subcontracted question as it should in UI.
STAFF: Hotfix Bug Contract Final Salary Code logic looking across hiring agencies assignments	Logic for message 4103 Missing required data: Final Salary Code is supposed to be triggered when person has assignment of type 0 or 1 and Subcontracted N or Null only in the currently selected hiring agency. Problem was if a staff person had multiple hiring agency assignments the logic mistakenly include all assignments in all agency in logic to notify if the Contract Final Salary should be triggered. This was fixed.
