

Release Notes for 11/29/2016 WISEid/WISEstaff Production Release (WISEid Core Apps Sprint 123)

Feature Title	Notes
WISEid/WISEstaff: Don't make Entity ID required when editing by DPI	DPI can now remove incorrect Entity IDs. We previously had to set them to zero as we couldn't set them to null. We have a clean up in next release to remove all zero Entity IDs.
WISEid: Change Request method new unread comments (unread part 2)	Users can now see an indicator when there are unread comments on the Messages and Changes page for Agency Change Requests. New sort in place so that any Change Request requiring your agency to vote is at top with red flags. Then after those in sort order are the Change Requests with unread comments. Once you open comments the unread comment count goes away for that Change Request until new comments are left by other districts.
WISEid: Disable ImportWLSStudents job in production	Did final WLS to WISEid imports. Will no longer import data from WLS. Did find more WLS persons who were not in WISEid yet and fixed.
WISEid: Remove Last Enrollment Information Section from UI	DPI privacy team informed us we can't allow Enrollment information to be in WISEid anymore so it has been removed. Only way to get to right now is in WISEdata after a person is enrolled with your district. If this present issue create DPI Help Ticket to investigate issue such as trying to figure out which district a student ended up in if not yours.
STAFF: Alert to complete initial certification shows after initial cert complete	Alert! Your agency must complete initial certification before x date was appearing after sign off. Fixed so it only displays if you haven't done initial certification.
STAFF: Annual Archive and Removal of active Validation Messages from previous years	Removed previous years validations from regular validations table to help improve performance of validations.
STAFF: hotfix agency 6964 Walworth co cdeb faults on Contract upload	Fixed issue for Walworth Co CDEB uploads not working.

STAFF: Validate Staff Data View Acknowledged Warnings

Now user have the ability to see acknowledged Warning messages the Validate Staff Data page by selecting the Include Acknowledge Warnings checkbox. Especially important to verify 4034 missing Entity ID validation warning messages get resolved.
