

Release Notes for 12/15/2016 WISEid/WISEstaff Production Release (WISEid Core Apps Sprint 124)

Feature Title	Notes
WISEid: Add full description of race key when two or more races selected	On Messages and Change Requests when viewing details of Change Requests when regarding a multi race/ethnicity change we now list out the full list of race/ethnicities.
WISEid: Run Process to finish WSLs data transfers for WSLs system shutdown - then verify data	Finished off process of make sure all WSLs persons that should have been included in WISEid were included.
WISEid: Suppress Duplicate Person Change Requests if in pending state	We have altered Change Request process so that when multiple uploads or Change Requests are created in exact duplicate for the same person with changes still in pending state only one change request is created. This will prevent duplicates due to multiple uploads of the same data.
STAFF: Audit - Create Audits Result Link to WISEstaff home page	Creating first steps for initial audit display. Currently only "Audit Results" page is displayed. No audit results yet. Final work to display audit results when ready is in next release.
STAFF: bug Entity ID change request should never be auto approved	At some point Entity ID Change Requests were set to auto approve as part of auto approve job every 7 days which should never happen. Now all Entity ID Change Request will require DPI to act on.
STAFF: Clean up duplicate Entity ID Change Request	Removed change request for Entity IDs when they were duplicates and didn't already have comments. One time cleanup since we fixed issue creating duplicate pending Entity ID Change Requests.
STAFF: Do not create Change Requests for Entity ID if a duplicate	If there is already a pending Change Request for a person and Entity ID than we will not create a duplicate Change Request. This is an oversight that caused a backlog of duplicate Change Requests.
STAFF: Ignore Zero Entity IDs	If users upload zero entity IDs in Contract Upload we will treat them as null and not create Change Requests for them.

<p>STAFF: job to update Entity ID Change Request to approved when Entity ID already in place</p>	<p>We have a job in place to automatically approve any Entity ID Change Request when that same Entity ID has been already applied to a person through our automatic job or manual input by CST reps. This will reduce number of Entity ID Change Request CST has to handle and speed up process.</p>
<p>STAFF: Modify Snapshot process to complete when teachers grades are missing</p>	<p>Internally we couldn't create our audit snapshot until all grades validation issues were resolved. We have modified process so we can snapshot statewide with grade validation issues unresolved. This will help speed up future snapshot and audits when all districts haven't completed their work.</p>
<p>STAFF: Staff Dashboard - Create Home Page</p>	<p>Adjust the Home page for WISEstaff for future dashboard modifications. Message size has been reduced.</p>
