

**Release Notes for 1/24/2017 WISEid/WISEstaff Production Release
(WISEid Core Apps Sprint 127 2-Week Work Cycle)**

Feature Title	Notes
WISEid: Agency Change Requests add the ability to Download	We added the ability to Download Change Requests by inserting a button on the Messages and Change Request page. CSV format file.
WISEid: <i>Bug--</i> Message and Change Request search by WISEid only works when agency is selected	On the Message and Change Request page when you searched by the WISEid filter, it would only work when you also selected a Requesting Agency. We have fixed it, so the filter to search by WISEid works with or without any other filters on the page.
STAFF: Add Column to Audit Reports grid for Content Report Type	On Audit Results we added a column for the Report Content Type. Report types include: <ul style="list-style-type: none"> ● FL – All Audit Exceptions ● LE - All Active Staff Due for License Renewal ● AA - All Audited Assignment ● AR - All Rejected Assignments ● EF - All Special Education Exceptions
STAFF: <i>Bug--</i> Missing Entity ID issues	On the WISEstaff Homepage the list of Missing Entity IDs was not correct. We have corrected it with the correct query.
STAFF: <i>Bug--</i> Statewide Validate Staff Data job unacknowledged warnings	Releases on 1/26/17 (later than the main release). A bug on 12/20/16 deleted all the acknowledgements of warnings by districts. This fix will restore those Warning acknowledgements from a 12/19/16 backup, so agencies don't have to redo them manually.
STAFF: Create Staff Data Validation page under Data Validation Reports Tab	We created a new Data Validation Reports page where we will put Data Validation Reports. There are no Data Validation reports yet, so there is nothing to use on the page at this point.

STAFF: Fix the Validate Staff Data function from displaying messages it shouldn't

A number of districts were seeing Info messages that never went away, saying *"WISEid x is no longer active due to a merge. Please update your systems to the current WISE Y."* We have removed these validation messages, as they were only supposed to be in the Results download files.
