

Release Notes for 9/13/2016 WISEid/WISEstaff Production Release (WISEid Core Apps Sprint 117)

Feature Title	Notes
WISEid: Hotfix Make uploads in process work when switching system years	We fixed issue where changes DPI made in system years it would cause problems for WISEid uploads in queue.
WISEid: Bug - Local Person ID Exists in Current Agency - Update Message & Fix Matching Logic	Local Person IDs were being forced to be unique for both staff and student together combined This was incorrect and was fixed. They only need to be unique inside their type (Staff, Student). Added an error message that includes the WISEid of the person the records is in conflict with "Local Person ID exists in current agency associated to WISEid #####".
WISEid / Staff: Allow Data Entry Roles to Delete Only Local Person ID Association to District	Non-read only user roles can delete the last Local Person ID for a person.
STAFF: Update Manage Position Area with new Position Area Update button broken	Fixed issue for DPI admin setting up 16-17 Assignment position and areas.
STAFF: Upload Audit 15-16 results	Uploaded audit results for 15-16 so that final 15-16 reporting can conclude.
STAFF: Provide query of unmerged reactivate persons with assignments and contracts	Found issues when unmerging and merging persons where old assignments and contracts were restored. Verified each case and corrected WISEstaff data where necessary.
WISEid: Add job to reactivate active WSLS WSNs	Some persons in WSLS who once deactivated because they had no real enrollment later came back as real students and our nightly data transfer jobs were not reactivating them in WISEid. We have fixed this issue.
STAFF: Create admin UI for dynamic assignment questions	WISEstaff dynamic questions for assignments now have UI and logic is locked to the UI where possible. Should reduce potential for bugs and speed up system setup.

STAFF: Change message 4034 to Warning (Can't Be Worked on in SY2016)

Error message 4034 "Person has assignment(s) requiring an educator license but has no ELO Entity ID." is now a warning rather than an error.
