

Release Notes for 9/22/2016 WISEid/WISEstaff Production Release (WISEid Core Apps Sprint 118)

Feature Title	Notes
WISEid/STAFF HotFix: Change statewide validation job to manual job	There was a statewide validation job for WISEstaff that slowed down both the WISEid and WISEstaff when it ran during normal operation hours. We disabled this job as an auto run job until we can adjust the system to prevent this job from running during the day.
WISEid: Fix Change Request Comments Field Validation Rule	Comment fields was a required field on Change Request. We removed it as a required field as it was originally intended to be.
WISEid: HOTFIX: Reduce unnecessary Signalr upload result page updateMessage callback requests	We had massive performance issues with WISEid uploads. Through troubleshooting we determined the problem was the technology solution that sends updates to the Results page was sending every user all changes to the upload queue. We altered logic so end users only get updates to their own uploads on the Results page. This fixed all performance issues.
WISEid: Issue with match reviews with RaceKey change requests	If during Review Matches a person uploaded is matched to an existing WISEid Person and the Race Keys differ an error results when the end user tries to finalize the match. This is has been fixed.
WISEid: Remove year from jobs to avoid year rollover issues	WISEid upload jobs had the collection year set in them so when DPI modified collection years it caused upload queue problems. We have removed the year since it wasn't needed anymore since WISEid doesn't have a year setting.
WISEid: changes in case of names creating change requests	Names changes that were just changes in cases where creating

	<p>Change Request. We modified system so if users upload case changes they are ignored. If user edits UI and there is a name case change it will apply to WISEid, but create an auto approved Change Request. The way the system is setup right now looks like casing matters, but really it isn't important to the WISEid system and we will eventually fix so casing is standardized system wide. So if you see your WISEid name cases doesn't match your SIS it doesn't matter - don't try to fix.</p>
<p>WISEid: Person Upload fault when duplicates and one record has WISEid and other not</p>	<p>Person uploads would fault if the same WISEid was in the file more than once or if same person info is in file more than once so that multiple updates would effect the same WISEid. We have prevented these cases through upload with a new error message.</p>
<p>WISEid: Differentiate between student and staff WISEid contacts</p>	<p>For Update Contact Info on the WISEid tab there is now ability to distinguish between staff or student WISEid contact or set to both. Not to be confused with WISEstaff contacts which are separate then "staff" WISEid contacts. We have migrated all existing contacts to staff type so please update to be correct if incorrect.</p>
<p>WISEid: On results page include indicator to show how many files are ahead of your person upload</p>	<p>To address numerous user requests wondering if there file was moving through the queue we have included an indicator on the Results page as to how far in the pending queue your upload is. Counter updates as you progress in the queue. Number one spot is first file behind the current processing file.</p>
<p>STAFF: Issue with Dynamic Questions when changing agencies</p>	<p>If user wanted to adjust an assignment in the Assignment UI and changed the school the questions would reset. We have fixed this so question answered</p>

	will remain so user can edit before saving.
STAFF: Add Audit Exceptions to HistoricalSnapshot database	Audit Exceptions results used in state reporting have been added to the snapshot database.
STAFF: Remove Active Flag in Assignment Table	In the database for Assignment table an active flag that wasn't currently being used by WISEstaff was present and causing confusion. It has been removed as to not confuse anyone in the future.
