MultipleBirthIndicator	Varchar/Text	1	Indicates if a person was part of a set from the same birth (twins, triplets, quadruplets, quintuplets, sextuplets, septuplets, octuplets). This field is highly recommended as it will block auto-matching and prevent incorrect auto-matching of siblings with the same birth date and same or similar names. It will also help with determining if a person is part of a multiple birth vs. a duplicate. Valid options are "Y", "N", or null.
Error Status	Varchar/Text	8	Shows if the error was resolved by another upload for a person with the same Local Person ID in the same agency. If "Active", it means the Error row is current and hasn't been resolved. If "Resolved", then this error has been resolved by a later date upload of the same Local Person ID in the selected agency.
