

Release Notes for 8/23/2022

WISEdata Portal

L2 Validations -

- Warning [7444](#) will throw when there is an overlap in dates surrounding a student's different learning modality types: in-person, remote, or hybrid. The [Learning Modality Type data element](#) page can provide you with more information on the different types of learning modalities and information on when to indicate a change in a student's learning modality type. Pertaining to this warning, please ensure that each time a student switches learning modality type that correct begin and end dates are entered.
 - For example, Student Z starts school in-person (a begin and end date are required), then switches to hybrid (a begin and end date are required), then goes fully remote for two-weeks (a begin and end date are required), and finally returns to in-person learning for the rest of the school year (a begin and end date are required). The dates provided for these learning modality types should show a continuous learning timeline, without gaps or overlaps.
- Error [6806](#) will throw if the wrong enrollment type is used. When a student is associated with their primary (primary as in 'accountable' school, not primary as in 'elementary grades') school, their enrollment type must either be primary or membership. [Membership](#) is a new enrollment type that only applies to LEAs participating in the WiSFIP [Pupil Count pilot program](#).

Ed-Fi Credential Application

Ed-Fi Credential Now Excluding Acknowledged Warnings from the LEA Monitoring page

An update in logic on the Ed-Fi Credential application will help LEAs prioritize L2 validation messages. Once a warning is acknowledged, it will no longer appear in the L2 Record Count. As such, LEAs will now only see unacknowledged warnings and errors listed that still need to be resolved.
