WISE Application Release Notes 01/23/2024 (Sprint 1099 and 1100)

WISEdata Updates

WISEdata Portal: Exports, Economic Status, and Food Service Eligibility
The relatively new ES/FS Eligibility Export has some small edits completed to improve functionality and formatting. One fix ensures that the definitions hyperlink opens as a pop-up window, as it does with all other exports. The other fix was to present the dates (on this export specifically, this would be the sSA Entry and Exit Dates, and the School Food Service Begin and End Dates) in the same standardized format as it appears on all other WISEdata Portal exports: MM/DD/YYYY.

WISEdata Portal: Emergency Bug Fix, Choice Student Report Card Status
The All Student Report Card: Opt IN/Opt OUT value was displaying incorrectly on WISEdata Portal for some agencies. When the school year was changed to an earlier year, and then changed back to the 2023-24 SY, the All Student Report Card value displayed as "Unknown." This bug has been fixed, and the data is now displaying properly, despite year changes being made.

Ed-Fi Credential: Email Notification Sent to Vendors for Modified Subscriptions
An email notification will be sent to vendors to notify them whenever an LEA adds, modifies or cancels a subscription. This allows vendors to update the Ed-Fi configuration on their end as needed. The email text will be standardized for each of the three scenarios (add, modify, cancel), and gives directions on when to login to the Ed-Fi Credential application to view and access updated credentials, as well as when key/secret changes occur. A hyperlink within the email provides vendors with an easy way to "reach out" to DPI with the WISE Help Ticket.

Ed-Fi Updates

WISEdash Updates

WISEdash Public Portal: Content
NSTR

WISEdash for Districts: Content
- Addition of Grades 6-8 to Arts Student Participation Snapshot dashboard
- Addition of latest year in ADA/ADM Attendance Dashboard (To be turned over tomorrow)

WISEadmin Portal and Other App Updates

WISEadmin Portal: Server Error
On WISEadmin Portal, when LEAs went to export Data Errata letters as a .csv file, an error would appear on the screen, and the LEA name would not appear. The bug has been fixed, and the application is now displaying and functioning properly.

WISEadmin Portal: District Library Plan Approval Functionality
On WISEadmin Portal, when a DPI staff is logged in with the user role 'Admin,' the District Library Plan screen now displays additional features for that DPI Admin user. The DPI Admin user can now:
- Add feedback in a comment box with unlimited number of characters,
- Click a button to either Approve or Return the submitted District Library Plan,
    - Once one of these buttons is clicked, the LEA will see in the Submission History a corresponding status as either:
        - Submitted: When submitted, this District Library Plan will be saved in the database with the status: Submitted.
        - Approved: only visible on the District Library Plan screen
        - Returned: only visible on the District Library Plan screen.
        - If the District Library Plan status is Returned, LEAs can edit the District Library Plan form.

WISE Webpage/Documentation Updates –
WISEdata and Data Elements

WISE Landing Page: Redesign Complete

[The WISE landing page](#) has been redesigned by user role. The landing page still features the same introductory video and is now also sporting a listing of common roles for customers visiting our webpages: data entry specialists, principals and administrators, teachers, families, and more. 11 new role-based webpages have been created to help provide users reference to webpages across many DPI teams. Support pages are connected with matching icons for visual cuing. Each support page contains a message across the bottom, encouraging customers to use the 'Submit Feedback' button to provide us with ways to improve the links on each page.

- Find a page that you wish was listed here? Click the big, purple, 'Submit Feedback' button below, and we'll get that added for you.

L2 7464: Logic Edit to Exclude Some Schools

[Error 7464](#) was new for the 2023-24 school year and threw when the First Day of School (FDS) and Last Day of School (LDS) data was not submitted. Logic for this error has been updated so that detention schools and alternative schools do not receive this error. This error **does** throw for public districts, non-district charter schools, CMO, DOC, DHS, County CDEBs, and State Schools.

CST and Other WISE Webpage Updates
