

# WISE Application Release Notes

## 10/31/2023

### WISEdata Portal Updates

#### WISEdata Portal: Change 'Career Pathways' to 'Clusters'

This label change is reflecting a name change so that consistent names and labels are reflected across platforms and areas in DPI. The new term 'clusters' will replace the term 'career pathways' for all current years in WISEdata Portal and will be visible on the Student Detail screen under the following headers:

- Roster panel
- School Roster details
- Programs > Career Education
- Career Education API View screen

#### WISEdata Portal: Certified/Not Certified CTE Errors

- Bug Fix: The Career Education Certified/Non-Certified Career Education Programs Errors has been glitching depending on a student's enrollment type: primary or coursework.
  - Grade levels are being pulled regardless of the student's enrollment type to help prevent glitches.

#### WISEdata Portal: Roster Export Renamed: "Sections – Student and Staff Count."

The 'Sections Missing Staff' column on the Roster Export in WDP will be renamed to improve clarity because this column on the export displays more than just courses missing staff.

- The new column header will be "Sections – Student and Staff Count."
- The new description will read, "This export includes records at the school level, including the number of students and staff information associated with a course. The export displays all records with sections and counts associated with students and staff."

### Ed-Fi Updates

NSTR

## WISEdash Updates

### WISEdash Public Portal: Successful Release of New Interface

- Miscellaneous link and text updates to the ESSA overview page
- New Menu Interface turned over including new links to training video and help text as well as modifications to the menu structure to make traversing the menu easier.

### WISEdash for Districts: Content

NSTR

## WISEadmin Portal and Other App Updates

### WISEadmin Portal: Bug Fix for Agency Contacts Screen

An error was throwing on the Update Agency Contacts screen in WISEadmin Portal. The glitch has been resolved and the screen is now working normally.

### WiSFiP: Exports

#### Exports in WiSFiP Not Downloading When Count is High

The max length was reconfigured on the WiSFiP Exports to accommodate larger numbers (i.e., 25,000+), making sure that exports download properly and do not time-out.

### WISEdata Finance

NSTR

## WISE Webpage/Documentation Updates –

### WISEdata and Data Elements

- [Reporting Uncommon WISEdata Situations](#) – Two sub-pages updated with more accurate and detailed information:
  - [Non-Traditional Students: International Students](#) (minor revisions)
  - [Off-Site Services: Day Treatment Centers](#) (major revisions)
- [Exit Types data element page](#) (information reorganized, still awaiting a few content updates on CE Exit Types for Day Treatment Centers)
- [WISEsecure Roles](#) (added WISEdata Finance and WiSFiP)
- [Vendor Resources: Development Resources section](#)

### WISEdash Website Updates

- [WISEdash Public Portal: Help Pages and User Guide webpage](#) – updated

- [WISEdash Public Portal: Navigation and Comparison Quick Start Guide](#) - updated

## **KBAs for Validations**

### **7127: Updated Logic**

[Error 7127](#) is about a graduation plan not meeting the minimum number of health credits. The logic for this error was repaired to improve accuracy. When users left the number of health credits blank, the error would throw, but if users entered the number of health credits as zero, the error was not throwing. The new logic causes this validation to throw only when the field for health credits is either blank or less than 0.5 credits.

### **6474: Performance Improvements Made**

[Warning 6474](#) is about zero attendance. This is a very important validation to run accurately because it is a large measure represented in snapshots/report cards for customers, as well as a few reports internal to DPI. Some programming adjustments were made to ensure this warning is throwing accurately.

### **KBA 7473**

Updated [KBA 7473](#) based on the past few weeks of User Group questions to provide a better customer experience with this new Error.

### **KBA 6777**

Updated [KBA 6777](#) based on the past few weeks of User Group questions to provide a better customer experience with this new Error.

## **CST and Other WISE Webpage Updates**

### **Updating WAMS Account When Changing Districts: Redirect is in Effect**

The [Updating WAMS Account When Changing Districts webpage](#) has received a new URL. Previously, WAMS content was nested under “WISE” but due to its widely applicable nature, and that the Dpi Customer Services team supports Help Tickets about some WAMS needs, all WAMS content has been moved to the customer service (cst) domain. The ‘redirect’ means that if you type in the old URL, you will be redirected to the new one.
