WISEdata Release Notes 1/5/23

WISEdata Portal (WDP) Updates -

- **Login Issues for Multiple Agencies Resolved:** User login issue was resolved across multiple platforms for agencies that were connected to multiple schools when some of the schools were closed. This login issue was resolved on WISEdata Portal, and was also resolved for administrators associated with these schools/agencies who use WISEadmin Portal. Additionally, this was repaired for EdCred.
- **Exports Showing Different Numbers:** A repair was made on WISEdata Portal to ensure that 'Enrollment Count Date' graphs for TFS and Oct 1 match exactly to the Enrollment exports, so that all students with an SwD identifier = TRUE are represented.
  - A similar repair was made on the School Roster Exports. All L2 rules that associate with the "Roster" category and endpoints now match between the validations messages screen and the exports.
- **Non-binary gender added to WDP Exports:** The definition for gender has been modified to include the non-binary gender option on all WISEdata Portal exports.
- **Vendor Resources:** Not all vendors were being displayed on the dropdown menu on WDP. This has been repaired, and LEAs should now be able to see and select all Vendors used within their school/district.
- **Bug Fix:** The city was not appearing in the upper right corner of the screen on WDP, following the LEA name, which made it tricky for the Customer Services Team to navigate between schools, since some school names appear in multiple cities (Ben Franklin, for example). This has been resolved.
