

WISEdata Release Notes 5/16/23 (Sprint 1082)

WISEdata Portal (WDP) Updates -

Performance Improvements:

We are continuing to work on API v6 upgrade-related changes for the 23-24 SY that will improve performance for our users. Examples include:

- Reviewing and creating new validation messages
- Enhancing user interface
- Working out bug fixes in WISEdata Portal

Additionally, we are making some improvements to WISEdata Finance to help with the performance and responsiveness of that application for users.

Bug Fix

The WISEdata Portal School Roster Details screen was incorrectly displaying the student and staff panels for a few LEAs. Underneath the 'Section Details' the "Students" dropdown panel should display a list of all the students in each course and the staff member teaching it, but these items were not displaying. The bug was fixed, and the students and staff are now displaying properly.
