

WISEdata Release Notes 6/13/23 (Sprint 1084)

WISEdata Portal (WDP) and Ed-Fi Updates - 2023-24 School Year Visible in WISEdata API

The 2023-24 school year is now available on the WISEdata Portal in the School Year drop-down (as of June 13, 2023). Vendors will now be able to pull courses, LEA and school info, descriptor values, etc., to store in their respective systems for the upcoming school year.

- **NOTE:** WDP will not display the 2023-24 school until early July.

Modifying Contacts in WISEdata Portal

LEA users can now update Primary Contacts to the WISEdata Contacts page more easily. [A Users can add a new Primary Contact can be added](#) when an old Primary Contact still exists.

- Within a current school year, if the Primary Contact is blank or still contains the primary contact from the previous school year, LEAs can now add a new Primary Contact, automatically marking the old/former Primary Contact as a 'generic' contact.
- However, there are limitations to the number of times this can be changed within one school year.
- Within a current school year, if the (new/updated) Primary Contact has already been added, and that name needs to change again for the same school year, an error message will display:
- "A Primary Contact has been provided for your agency. Only one Primary Contact can exist. Please check the 'Agency Contacts' page for details."
- The same is true for the changing of Secondary Contacts.
- If you have questions or need help adjusting the Primary and Secondary Contacts for your LEA, please contact the [Customer Services Team](#). Select "WISEdata Portal" as the application on the Help Ticket.

Validation (L2) Updates:

- [Error 7117](#) and [Error 7118](#) have been merged together. 7118 will become inactive with the start of the 23-24 SY.
- 7117 used to be just for active WISEids.
- 7118 used to be just for inactive WISEids.
- NOW 7117 is for BOTH active and inactive WISEids, with a missing Enrollment Transfer Code (ETC) when there is a transfer between different districts, and the Term Completion Indicator is Y (yes).

Performance Improvements Continue:

Upgrade-related changes around the API v6 continue to remain in place for the 23-24 SY. This upgrade will improve performance for our users. Examples include:

- Reviewing and creating new validation messages
- Enhancing user interface
- Working out bug fixes in WISEdata Portal
